

XChange International announce OpenNow Pro for CS3

Published on 07/30/07

XChange International, the source for extended technology worldwide, are pleased release of OpenNow Pro for Adobe InDesign CS3. OpenNow Pro is the perfect link between InDesign and image applications. Users can now open any document picture with the application they choose, and at the same time get detailed and comprehensive picture information.

XChange International, the source for extended technology worldwide, are pleased release of OpenNow Pro for Adobe InDesign CS3. OpenNow Pro is the perfect link between InDesign and image applications. Users can now open any document picture with the application they choose, and at the same time get detailed and comprehensive picture information.

Double-clicking any picture presents the user with all image settings, from the colour profile to effective resolution to its full path. The user can then select up to 50 favourite programs to open the picture in.

With OpenNow Pro, users are no longer limited to opening the picture with the application that the OS X Finder assigns by default. They can now select any application they choose, and OpenNow Pro will add it to a list of 50 recent applications allowing the user to switch back and forth between their favourite image editors. And, for even more control, any given application can be "locked" to open all subsequent pictures with that application only.

If all a user needs is to access image settings quickly and easily, then the OpenNow Pro window puts all the information at your fingertips. Presented in an easy-to-read format, OpenNow Pro shows these picture attributes: name and file icon, full path, file size, dimensions, scaling, format (EPS, TIFF, etc.), colour model (RGB, CMYK, etc.), absolute and effective resolutions, date modified, status (Up to Date, Missing, etc.), colour profile, preview resolution and default editing application.

In addition, OpenNow Pro comes with several useful tools for managing pictures. Users can reveal the picture or any of its enclosing folders in the Finder, bring the picture up to date after it has been modified, change the preview resolution, and relink images.

System Requirements:

Adobe InDesign CS3 and Mac OS X 10.4.2 or later.
OpenNow Pro is also available for QuarkXPress.

OpenNow Pro is available now through XChange International. To order, or for more information, users can visit www.xchangeuk.com, or call on +44(0)20 7490 4455 during UK business hours.
