

Deliver Express 2.4.4 Improves Email Notifications Reliability

Published on 06/12/14

Zevrix Solutions announces Deliver Express 2.4.4, a maintenance update to its automated solution to send and share files across the Internet and local networks. Deliver Express processes files automatically from watched hot folders and can serve multiple users on a network with a single copy of the program. The software offers e-mail notifications, file compression, detailed history and more. The new version addresses an issue that could prevent email from being sent via certain SMTP servers.

Toronto (ON) Canada - Zevrix Solutions today is proud to announce the release of Deliver Express 2.4.4, a maintenance update to its solution to send and share files easily across the Internet and local networks automatically. Deliver Express processes files from watched hot folders and supports FTP, Amazon S3, WebDAV, AFP and other remote and local services. The software can run absolutely unattended and offers variable e-mail notifications, multi-destination transfer, file compression and encryption, and much more.

The new version addresses an issue that prevented Deliver Express from sending email via certain SMTP servers. While the software supports several SMTP authentication mechanisms such as PLAIN, LOGIN and CRAM-MD5, previous versions could fail to send email notifications if the PLAIN mechanism wasn't supported by the selected SMTP server.

"What's great about Deliver Express for organizations is the unattended nature of using a hot folder," writes Jeffrey Mincey on Mac360.com. "It's perfect for all kinds of file delivery. Sensitive documents, encrypted files, financial information, graphic files, photographs, large files and so on."

Being used by such major ad agencies as BBDO, MacLaren McCann and Innocean, Deliver Express is ideal for companies and users that constantly send files to specific destinations. The software can benefit publishers, photographers, audio/video studios, printers, educational institutions and other users. Deliver Express offers the following key features:

- * Drop files to watched hot folders for automatic delivery
- * Supports FTP, SFTP, WebDAV, Amazon S3 and other remote and local services
- * Automatic variable e-mail notifications
- * Recipients download file from a link in the email message
- * Automatic file compression and encryption
- * Serve multiple users on a network
- * Submit files from both Mac and PC stations

Pricing and Availability:

Deliver Express can be purchased from Zevrix website as well as from authorized resellers. The license prices are based on the maximum number of allowed destinations and range from \$29.95 to \$299.95 (USD). The update is free for licensed customers. Trial is also available for download. Deliver Express requires Mac OS X 10.5-10.9.
