

WritePad 7.4 Features Improved Handwriting Recognition and Note-Taking

Published on 07/22/14

PhatWare today announces WritePad 7.4, a significant update to their popular handwriting recognition and note-taking app for iPads. WritePad can convert practically any handwriting into computer text. Notes created with WritePad can be sent via email or SMS, tweeted, saved, posted on Facebook, printed, exported as PDF and so much more. Version 7.4 improves the note-taking experience as well as offers improved spelling check and multiple suggestions for words and phrases.

Spokane, Washington - PhatWare Corporation, leading professional software and application developer, today is proud to announce the release and immediate availability of WritePad 7.4, the significantly improved version of the popular handwriting recognition and note-taking app for iPads. WritePad 7.4 now improves note-taking experience and includes all eleven supported languages with the app price in addition to a reduced application size.

WritePad 7.4 is designed to deliver considerably faster note-taking by offering multiple suggestions for words and phrases as notes are taken in the user's own handwriting. As a user writes anywhere on the screen or in a designated area, alternative recognition results and word completions are presented in a scrollable suggestion bar next to the text, allowing a user to select an alternative result if the initial translation of the handwriting is incorrect.

To further speed-up and simplify the process of taking notes on the iPad, spell-checker suggestions are presented to a user in real-time when the text cursor is positioned on a misspelled word.

In addition to providing users with more features, WritePad also delivers more value. The app now comes with all eleven supported languages included, rather than requiring an in-app purchase to obtain additional languages. WritePad's size has also been reduced by 30%, providing more features with less space requirements.

"I used [WritePad] to write two of my novels - The Jaws of Life and The Lazarus Serum. It's a word processor that lets you write your books by hand rather than by keyboard on your screen. It has built-in handwriting recognition that will translate your scribbles (even cursive) into neatly typed words." - Fallon Jones, author

About WritePad:

WritePad, an advanced note-taker for iOS, converts practically any handwriting into computer text. Notes created with WritePad can be sent via email or SMS, tweeted, saved, posted on Facebook, printed, exported as PDF, translated to other languages, synchronized with major computing cloud services, and exchanged directly between two or more iOS devices. WritePad also features integration with the iPhone's or iPad's Events, Contacts, Maps, and other apps.

With WritePad, users can:

- * Create and edit text documents while using the advanced handwriting recognition engine or the iPad keyboard for text entry
- * Improve handwriting recognition quality with WritePad's Statistical Analyzer, which learns and adapts to the user's handwriting style
- * Email, Tweet, print, and post Facebook updates directly from WritePad
- * Synchronize WritePad documents with Google Drive, iCloud, Dropbox, Evernote, Box, Microsoft OneDrive, and iTunes

Device Requirements:

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Compatible with iPad
- * Requires iOS 6.0 or later
- * 27.5 MB

Pricing and Availability:

WritePad 7.4 is \$4.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the App Store in the Productivity category. For more information about the WritePad product line, please visit PhatWare's website.
