

Zicron Software releases Years 1.1 for iPhone - A Year In Your Pocket

Published on 08/18/09

UK based Zicron Software Limited has released Years 1.1, an update to their popular year calendar for iPhone and iPod Touch. Designed specifically to take advantage of the iPhone's unique capabilities and interface, Years is a year calendar for easily referencing dates and tracking day events using colored scribbles. Email months to friends and colleagues. Simple and easy-to-use, Years is helpful for tracking holidays, shift work, medical treatments or any other day events.

Inverurie, Aberdeenshire/Scotland - Zicron Software Limited has released Years 1.1, an update to their year calendar for iPhone and iPod Touch. Designed specifically to take advantage of the iPhone's unique capabilities and interface, Years is a year calendar for easily referencing dates and tracking day events using colored scribbles. Email months to friends and colleagues. So simple and yet so useful. Navigate through the days and months of a year, then tap on a month to enlarge it and tap the days to add clear visual scribbles. The brain naturally identifies shape and color for easily identifying days.

Changes in this version:

- * Change the day your week begins
- * Email a month
- * Copy a month to the pasteboard
- * Yearly scribbles counter
- * Star scribble
- * minor enhancements

Using a filofax metaphor and a focus on ease-of-use, Years 1.1 serves as a replacement for the diary's year calendar with an elegant digital year calendar. It features a natural user interface, and perfect for tracking holidays, shift work, medical treatments or any other regular day events. Years sports a large month display making it easier to associate days with colored scribbles, as well as employs the users regional settings.

"The motivation for Years was born out of an old application that I used a lot on my Palm. I frequently check dates on my iPhone and it's really awkward going through the months in Calendar." said John S. Eddie, founder of Zicron Software Limited. "I tried to use the year view in a filofax as a metaphor while developing Years. You will see the leather background of the application and the paper background behind the months while the scribbles emulate a person scribbling/marketing a day on the paper year calendar."

Feature Highlights:

- * Natural user interface
- * Easily navigate through days, months and years
- * Large month display
- * Associate days with colored scribbles
- * Share you months using email
- * Uses the users regional settings

System Requirements:

- * iPhone and iPod Touch with iPhone OS 3.0 or later

Pricing and Availability:

Years 1.1 for iPhone and iPod Touch may be purchased now for the low price of \$1.99 (USD) and available exclusively through Apple's App Store.
