

Spartadata releases Billing: Credit Card Terminal 1.0 for iPhone

Published on 08/26/09

Spartadata has announced Billing: Credit Card Terminal 1.0, their new credit card terminal solution for iPhone & iPod Touch. Developed specifically to leverage the iPhone's unique capabilities & interface, Billing is a virtual credit card point-of-sale terminal. Key features include direct support for touch-based signature capture. Core features include transaction history, stats, new transactions, refunds, in-app merchant signup, merchant app PDF, customer support info, and more.

Homestead, Florida - Spartadata has announced Billing: Credit Card Terminal 1.0, their new credit card terminal solution for iPhone and iPod Touch. Developed specifically to leverage the iPhone's unique capabilities and interface, Billing is a professional level, virtual credit card point-of-sale terminal. Complete reporting, stats, and refund options are just some of the many powerful features that are bundled into the service.

With a focus on ease-of-use, Billing: Credit Card Terminal allows anyone to process card transactions at any time. The service offers encrypted transaction using the AuthorizeNet API, is web based, wireless and secure, so users can bill their clients from anywhere. Users simply enter the clients credit card number along with basic card info and they're done. A printable receipt is also part of the system which allows convenient emailing of signed virtual receipts for customer records.

Billing sports an innovative, modern user interface with a intuitive transaction workflow whose feature-set is unrivaled. Its core features include transaction history, stats, new transactions, refunds, in-app merchant signup, merchant app pdf, customer support info, and various other key features. Among only one of Billing's most distinctive features is its unique tip and finger signature capture that allows a complete receipt to be emailed including the bitmap signature as part of the receipt.

"Having previously co-founded a web based billing and client management system, I felt that the iPhone platform was an ideal place to create a set of key business solutions based on innovative workflows using unique interface designs," said Michael Cruz, founder of Spartadata. "Billing: Credit Card Terminal serves as the base to build out from. As the first app of its kind to include signature capture and self-contained signature as part of the emailed receipt is something I felt was missing from alternative solutions so it was one of those features that compelled me to start the project."

Additionally, the application includes a full demo toggle that performs all the functions in demo mode. This is useful when setting up a merchant account for the first time (users can begin the signup process for a merchant account directly within the application). No credit card info is stored locally on the iPhone.

Feature Highlights:

- * Innovative modern User Interface
- * Intuitive Transaction Workflow
- * Instant Processing Status
- * Complete Transaction History
- * Tip inclusion
- * Customer Signature Capture
- * Customer Receipt is emailable including Signature
- * Refund support included
- * Easy Demo Mode toggle
- * Begin the Signup Process for a Merchant Account within the app
- * Customer Support built into app
