

## Musk MIDI Player 2.0 for iOS

Published on 10/25/14

Music software developer Jorg Garbers announces Musk MIDI Player for iPhone, iPad and iPod touch with iOS 8 support. Beyond basic MIDI file playback, the app has advanced mixing and navigation controls for practicing musicians. It displays active note events on a keyboard and provides a list of lyrics and marker events for score following and navigation. Lyrics and bar and beat numbers can be read using the built-in speech synthesizer.

Torgau, Germany - Music software developer Jorg Garbers announces the release of Musk MIDI

Player 2.0 for iPhone, iPad and iPod touch. The app is an instant MIDI player with advanced mixing and navigation controls for practicing musicians. Users have to bring their own sound font and MIDI files, or download files from the internet. While the app plays back MIDI files, users can see the active notes on the keyboard and use advanced features for score following.

To make following a printed score easier, bars and beat positions as well as lyrics can be announced during playback using any of the built-in speech synthesizer languages and voices. For rehearsal, users can change the playback tempo and jump to marker and lyrics locations. They can change the volume of the different tracks, and switch on or off the display of notes from different voices.

The app supports the import of MIDI and karaoke files or zip archives from Safari and other apps, iTunes, iCloud, iCloud Drive or the new iOS 8 document providers. Users can organize files hierarchically, open them in other apps and share them with friends. The audio output can be used in inter-app audio and Audiobus applications.

Language Support:  
English and German
