

SecuritySpy 3.4.3: Update to Mac OS X Video Surveillance Software

Published on 11/26/14

Bensoftware today announced the release of SecuritySpy 3.4.3, an update to the premier multi-camera video surveillance software for the Mac. With features such as motion detection, flexible video/audio capture, and remote monitoring and configuration, SecuritySpy is designed for demanding video surveillance applications. New features in this version include improved motion detection, better network performance and support for more IP cameras.

London, United Kingdom - Bensoftware today is proud to announce the release of SecuritySpy 3.4.3, an update to the premier multi-camera video surveillance software for the Mac. With features such as motion detection, flexible video/audio capture, and remote monitoring and configuration, SecuritySpy is designed for demanding video surveillance applications. New features in this version include improved motion detection, better network performance and support for more IP cameras.

"This update represents our ongoing commitment to maintaining top-quality software and responding to our customers' feedback" said Ben Bird, the developer of SecuritySpy. "We are particularly pleased with the new motion-detection algorithm, which has been completely re-written to provide excellent sensitivity and accuracy."

The main features of SecuritySpy are as follows:

- * Displays and records multiple cameras simultaneously
- * Supports all major brands of IP cameras, including ONVIF-compatible cameras
- * Supports all industry-standard media formats: JPEG, MPEG-4, MxPEG, H.264, AAC
- * Wide protocol support for maximum camera compatibility: HTTP, RTSP, RTP, TCP, UDP
- * Extensively threaded to take full advantage of multi-core computers
- * Built-in secure web server for remote viewing and administration
- * Pan/Tilt/Zoom (PTZ) support
- * Sophisticated motion detection

SecuritySpy supports a wide range of network cameras and video servers, including the popular Axis, Dahua, Canon, Sony, Hikvision and Vivotek ranges. SecuritySpy features sophisticated motion detection, which can be used to trigger recording as well as email alerts, audio alarms, iOS push notifications, and external devices. The built-in secure web server allows remote monitoring of live feeds and captured footage, as well as configuration of the software, from over the internet using a web browser or a mobile device such as an iPhone or iPad.

Pricing and Availability:

Pricing is in British Pounds, Euros or US Dollars and depends on the number of cameras used, ranging from GBP 29.90 (approx. USD \$50) for the single-camera version, to GBP 649.00 (approx. \$1090) for the unlimited-camera version. SecuritySpy supports any Intel Mac running OS X 10.5 "Leopard" through 10.10 "Yosemite". A 30-day fully-featured trial of SecuritySpy is available for download.
