

System Monitor that monitors iPhone health, now updated for iOS 8.1

Published on 11/29/14

Tekton Technologies today announces System Monitor 3.0 for iOS 8.1, a comprehensive health check for iOS devices. The application monitors the memory usage, frees unused memory, battery life, running processes, and disk information. System Monitor helps to free memory and speed up any iDevice. The app presents all the information in a easy to visualize graphical view, as well as offers helpful alerts, letting the user know when their device's systems have reached certain limits.

San Jose, California - Tekton Technologies today is pleased to announce System Monitor 3.0 for iOS 8.1, a comprehensive health check for the iPhone, iPad, and iTouch. The application monitors the memory in use, frees up unused memory to speed up the iPhone, monitors battery life, running processes, disk information and other activities on the user's device. It also activates helpful alerts set by users, letting them know when their device's systems have reached certain limits.

Feature Highlights:

- * Monitors used memory and frees unused memory of background Apps, by reclaiming the memory unused
- * Used Space Pie-Chart and 3D bar graphs of used memory
- * Useful battery life and time information
- * Tracks running processes
- * Disk and device information, showing free and used space
- * IP address acquired, hardware address and more
- * Helpful alerts notify users when their iOS device reaches system limits

Upon opening the application, the user may watch as the speedometer in first tab, Memory in Use, decreases. This vivid display demonstrates the app freeing the device's memory and shows the user the amount of memory remaining in use. If they prefer, users may also double tap the speedometer display to view the memory break up in a handy bar graph in the same vivid colors.

The battery tab offers an engaging display, the color of which is alterable by the user, showing the percentage of battery charge remaining, as well as the time it will take to recharge the device at its current state. Tapping on the battery allows the user to view a comprehensive list of how long the user can expect to use the device for various purposes before charging will be necessary. Here, the user may also set his or her own Battery Health as well as the device's Low Battery Level; when the device reaches this level the app will remind the user to charge it.

The application provides users with a complete list of running processes, making them aware of the apps running on the device. Users may want to close out of some such processes they may not realize are draining battery. The Disk Information tab provides a pie chart displaying the amount of memory available and the amount currently used, providing the information in understandable percentages as well as megabytes. The device's personal settings are also available, making it easy for the user to locate the operating system, IP address, last boot, hardware address, and more.

System Monitor 3.0 provides a wide-ranging health check; this comprehensive App combines health monitoring functions usually reserved for individual, dedicated apps. The vibrant 3D visuals along with impressive sound effects enhance the health check experience, making it easy to use and enjoyable for all users.
