

FusionMaps Pro for FileMaker - flash maps for FileMaker is released

Published on 08/12/07

InfoSoft Global introduces flash map component for FileMaker, FusionMaps Pro for FileMaker. This is a cross platform product and uses built-in features of FileMaker and Flash.

InfoSoft Global announces the release of FusionMaps Pro for FileMaker, a platform-independent flash map component that creates interactive, animated and data-driven maps within FileMaker solutions.

FusionMaps Pro for FileMaker is a collection of 186 maps including the states and counties of U.S, different regions of UK, Europe, Oceania, Asia, Africa and Middle East. All the maps of FusionMaps suite are customizable; users can change all map cosmetics and add 3D and animation effects as well. The Visual GUI provides a WYSIWYG platform for the users to configure and customize the maps easily.

Among all the features of FusionMaps, Markers and Marker Connectors hold great importance. Markers are user-defined points on maps, used to pin-point cities, office locations, junctions or any important centers worth highlighting. Marker Connectors are used to connect the markers on the map. Connectors can be used while developing applications which deal with transportation routes, network of places etc.

FusionMaps Pro for FileMaker also offers FusionMaps Library, a collection of FileMaker scripts which can be used to integrate FusionMaps within FileMaker solutions. The online documentation published by FusionCharts team elaborates the usage of maps in FileMaker and various features of FusionMaps through demo applications and sample codes.

This cross platform tool uses built-in features and functions of FileMaker and Flash Player to generate maps. FileMaker (Version 8.5) and Flash Player are needed for FusionMaps to work; no server side software, external plug-ins or drivers are required.

FusionMaps offers a cost effective licensing. To get information about licensing and to download no-restriction trial version, visit FusionMaps Pro for FileMaker website.
