

Typinator 6.4 adds support for nested expansions

Published on 01/15/15

Ergonis Software today announced the release of Typinator 6.4, a new version of their popular text expander. The new version comes with a new feature that lets you nest existing abbreviations inside other expansions. You can use this feature to insert previously defined expansions in new ones, for example to insert a completely assembled date in another expansion, or to add a formatted signature at the end of a boilerplate mail template.

Perg, Austria - Ergonis Software today is proud to announce the release of Typinator 6.4, a new version of their popular text expander. Typinator is a powerful, yet elegantly simple solution that boosts your productivity by automating the process of inserting frequently used text and auto-correcting typing errors. Across all applications, it detects specific sequences of typed characters and automatically replaces them with text snippets, graphics, URLs, dates and special characters.

Typinator 6.4 comes with a new feature that lets you reuse existing abbreviations inside other expansions. To do so, you just specify an abbreviation within the definition of another expansion. When Typinator expands the container expansion, it also replaces the nested abbreviation with its corresponding expansion.

The included expansion may also contain other markers and even regular expressions. You can use this feature to insert previously defined expansions in new ones, for example to insert a completely assembled date in another expansion, or to add a formatted signature at the end of a boilerplate mail template.

The new version also works around an issue in Safari, where incomplete expansions could occur in certain web forms, and fixes a problem that caused termination of expansions with input forms. Visit Ergonis Software's website to view the full list of changes and to download a trial copy.

System Requirements:

Typinator 6.4 requires Mac OS X 10.6 or newer and is fully compatible with OS X Yosemite (10.10). The usage of regular expressions requires Mac OS X 10.7 or newer.

Availability and Ordering:

Typinator can be purchased securely on the Ergonis Software website. The upgrade to Typinator 6.4 is free for anyone who owns a valid license for Typinator 6. Upgrade paths are available for owners of older licenses. For information about purchases, including enterprise licenses, volume discounts, and upgrade pricing offers, see the company's web site.
