

MailRaider is bigger, better and in your pocket

Published on 02/19/15

Have you got old e-mails archived somewhere? Have you ever wished that you could read your old Microsoft Outlook .msg or winmail.dat files on your Mac, iPad, iPhone or iPod touch? Wish no more - because MailRaider is now available on iOS as well as Mac OS X. It can open files written by Outlook and extract the attachments. MailRaider Pro adds more power, support for additional mail formats, including Winmail.dat (TNEF), and the ability to extract email to XML and MBOX.

London, United Kingdom - MailRaider was the first application available for the Mac capable of reading Microsoft Outlook files and it's still the essential tool for anyone upgrading from a Windows computer to Mac - no longer are all those email files lost and unreadable.

MailRaider Pro added support for additional mail formats, including Winmail.dat (TNEF), and the ability to extract email as XML so that you can process it later using tools of your own. MailRaider Pro can automatically extract your Outlook files into the most appropriate format - so Message files are extracted into Apple Mail format (or your email client of choice), appointments are extracted into Calendar format and addresses are extracted into Contacts format. Better yet, if you have many emails to extract then you can choose to extract them in bulk - and save them to MBox format for import directly into your Mail client.

MailRaider and MailRaider Pro are now joined by MailRaider for iOS. It's the same essential tool, but in your pocket.

You now know that MailRaider is powerful - but how easy is it to use? With a configurable user interface, the answer is 'very easy'. On the Mac, you can configure MailRaider with the tools that you need - and hide the tools that you aren't interested in. MailRaider is as personal as your email. MailRaider Pro can, of course, display your email with the formatting intact - but if you prefer your email to be plain and stripped of all unnecessary content then you can choose to display your email without formatting as well.

MailRaider is beautiful too, with high resolution custom icons that shine on your Retina display equipped Mac or iOS device. It's even beautiful on Macs without Retina screens - no attention to detail has been spared in providing the best user experience.

Searching through your emails is as easy as falling off a log. MailRaider Pro has support for QuickLook (so that you can read your email without loading MailRaider) and Spotlight (so that you can easily search for the Outlook file that you need).

Full help is provided on all MailRaider functionality. If you're stuck for an answer, check the help files. If you're still none the wiser then explore the 45RPM Software forums and start a discussion about your problem. If neither of these facilities answer your questions then just send them an email. Whichever way you slice it, they've got you covered.

MailRaider for Mac isn't Anglocentric either. In addition to English, MailRaider is localised into French, Spanish and German - and not just for the application itself either, the help files are fully translated too. On MailRaider for iOS there isn't any need for large amounts of text in the UI - and icons are universally understandable.

System Requirements (Mac):

* Requires a 64bit Mac (most Intel Macs built in 2007 or newer)

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Running Mac OS X 10.6 or newer
- * 20 MB free disk space

System Requirements (iOS):

- * Requires any iOS device running iOS 7.1 or newer

Of course, all 45RPM Software benefits from exceptional support - you'll never be left feeling forgotten or unloved. If you've got a problem with any 45RPM Software applications then let them know (on the support forums, via twitter or via email) and they will help you out. And whichever version of MailRaider you choose, there are no hidden costs in the form of costly in-app upgrades.

45RPM Software is an European husband and wife team, developing useful tools for the Mac since 2007. Our most popular applications are Locamatic (since 2007) and MailRaider (since 2009) - but USBleat (2013) has proven surprisingly popular in Holland and Japan.
