

## The First Simon Like Puzzle Game for the Apple Watch

Published on 04/01/15

ArchSquare today announces Clover Clover, the first Simon like puzzle game which will be available in the Apple Watch App Store on launch day April 24th. Clover Clover brings the classic memory puzzle game genre onto the Apple Watch. It is a simple yet challenging game of observing and repeating as many sequences as possible before making a mistake. The game style and playability fit perfectly in the casual Apple Watch gaming platform.

Phoenix, Arizona - ArchSquare today is proud to announce the the first Simon-like puzzle memory game "Clover Clover" which will be available in the Apple Watch App Store on launch day April 24th. "Clover Clover" is a simple yet challenging game of observing and repeating as many sequences as possible before making a mistake. The game style and playability fit perfectly in the casual Apple Watch gaming platform.

"Clover Clover" brings the popular memory puzzle game genre onto the Apple Watch. It is easy to learn and challenging enough for the most advance players. Simply observe the sequence and repeat it back without making a mistake. The speed at which the sequence is present to the player is progressively faster in the higher levels. Players can play by themselves or compete against their friends in a global high score board.

"Clover Clover is our first of many games we are working on for the Apple Watch. We are investing our best teams of designers, usability engineers, and developers to move aggressively into the wearable platform that Apple Watch provides and want to be the leader in this casual gaming space," said Henry Ton, CEO of ArchSquare. "By extending the user's experience of the game through the watch, the player's engagement and enjoyment is different through the unique interface. We are planning many casual games to be available in the Apple Watch App Store on launch day."

### Features:

- \* Simple Operation: Single tap input repeat the sequence
- \* Game Center: High scores are submitted to the Game Center's leaderboard
- \* Downloadable through the Apple App Store

The most challenging part of creating an Apple Watch app is the form factor of the screen and the usability for the users. For this reason, game buttons are large, colorful clover petals. This allows the users to clearly observe the sequence as well as repeat them with ease. We want the challenge to come from the intrinsic rules of the game and not from the medium that it is played upon.

### Device Requirements:

- \* iPhone (5 and higher), iPod touch (5 and higher), iPad 1/2/3, and/or Apple Watch
- \* iOS 6.0 or later
- \* Universal Application
- \* 35 MB

Clover Clover will be available in the Apple Watch App Store on launch day April 24th. For more information, contact Henry Ton or visit ArchSquare online.
