

Secure Text Keyboard- Keyboard for sending private messages from any app

Published on 04/07/15

Independent developer, Kinshuk Kar today announces Secure Text Keyboard 2.0 for iOS, a custom keyboard for sending private messages from any application. Secure Text Keyboard was specifically developed for sending secret messages, login details or confidential business information which only the recipient can view. The app uses industry standard AES-256 encryption for encrypting the messages. Version 2.0 adds a normal mode for sending unencrypted messages, help videos and more.

Bangalore, India - Independent developer, Kinshuk Kar today is pleased to announce the release of Secure Text Keyboard 2.0, a custom keyboard for sending private messages from any application. Messages can be encrypted right from the keyboard with just a single tap. Users do not have to switch between multiple apps for encrypting and sending a private message. This makes it very convenient to use Secure Text Keyboard for private messaging and gives it a competitive edge over other encryption apps.

Secure Text Keyboard was specifically developed for sending secret messages, login details or confidential business information which only the recipient can view. The app uses industry standard AES-256 encryption for encrypting the messages so that you can rest assured that your private messages are safe. Get going with these simple steps:

- 1) Install the app and set up the encryption keys in the app.
- 2) Share the key with the person you want to communicate with privately.
- 3) Install the keyboard and use your favorite chat application to send private messages.

Secure Text Keyboard is required at the receiver's end also for decrypting the private messages. To decrypt the private messages received - Set the decryption key in the app and simply copy the received message in the keyboard and tap the Decrypt button. The plain text message will be displayed.

What's New in Version 2.0

- * Added normal mode in Secure Keyboard for sending unencrypted messages
- * Added help videos for using the app
- * Multiple bug fixes and improvements

Device Requirements:

- * iPhone and iPod touch
- * iOS 8.0 or higher
- * 6.1 MB

Pricing and Availability:

Secure Text Keyboard 2.0 is available worldwide on the App Store as a free download. Secure Text Keyboard is designed for iPhone and iPod touch and requires iOS 8.0 or higher.
