

Tembo 2.0 - Easy and effective file search helper

Published on 07/17/15

Houdah Software today announces Tembo 2.0, a major upgrade to their file search helper for Mac OS X. Tembo is an easy-to-use file search tool that builds upon the existing Spotlight index. Tembo does one thing well: find files. Version 2.0 has been updated with a fresh user interface. It is faster, adds new features, and remains as easy to use as ever. To celebrate its release, single user and single family licences are 53% off until July 31, 2015.

Luxembourg - Houdah Software today is proud to announce the immediate availability of Tembo 2.0 for OS X Yosemite. Tembo is a super-efficient, organized file search tool. The job of Tembo is to make searching (and finding) of files, mail messages, bookmarks, photos, etc. as easy as possible. Tembo puts the spotlight on your files.

Tembo is a desktop search tool based upon the powerful Spotlight engine. Tembo's strength is its easy to use interface. It's signature feature are the context-sensitive filters to narrow down search results. In first pass, Tembo groups search results by file type categories. For each group the top 10 matches are displayed. Preferences allow for groups to be enabled, disabled and reordered.

The real power and convenience of Tembo is revealed on drill-down into a group. Here Tembo lists up to 10'00 search results. Next the results are context-relevant filters. These make it easy to break down long search results lists. E.g. a sidebar in the Documents group lists file types of found files. A single click reduces Documents search results to only Word files.

Each result category has its own dedicated filters:

- * Bookmarks & History: Type, URL Domain
- * Documents: File Type
- * Fonts: File Type
- * Images: Resolution, File Type
- * Messages: Subject, From, To
- * Movies: File Type, Codec
- * Music: Artist, File Type
- * PDF Documents: Author
- * Source Code: File Type

Enhancements brought by Tembo 2.0 include:

- * Actions: rename, tag, or trash files from search results
- * Sharing: send files by Mail, Messages, Facebook, etc.
- * File Info window: easy-to-read overview of important file properties
- * View options: font size, date format, grid of icons or previews
- * Menu bar button and global keyboard shortcuts
- * Up to 10'000 results in each group (up from 2'500)
- * Collapsible groups: hide seldomly visited groups
- * Improved performance
- * Option to hand a search over to HoudahSpot

System Requirements:

- * OS X Version 10.10 or higher
- * Spotlight indexing enabled
- * 10 MB of disk space

Pricing and Availability:

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

Tembo 2.0 is available for download from the Houdah Software web site. The demo version is fully functional. It however shows a message and adds a delay when opening files from search results.

A single-user license is priced at USD \$15 + tax for a single-user license. A family license is available for \$22. Upgrades from previous versions are priced \$6.95 and \$9.95 respectively. Upgrades are available through the store built into the demo version of Tembo 2.0.

Tembo 2.0 is also available through the Mac App Store at USD \$14.99 + tax (or local equivalent). The version of Tembo available on the App Store is confined to the OS X application sandbox. The sandbox requires Tembo to ask for explicit permission before it can access files or folders. It also restricts interactions between applications. Thus some features are available only in the direct download version of Tembo.

To celebrate the launch of Tembo 2.0, full licenses are sold at a 53% discount through July 31, 2015.
