

## Introducing AudioBrain: an Audio Memory Development App

Published on 08/24/15

Created for those who want to expand their mental capacity, AudioBrain uses techniques to help arouse under-active brain regions, namely the ones used for processing audio data. Through the use of classical poems, users are able to enliven their remembering process. Compatible with the iPhone, iPad, and iPod touch, AudioBrain has a methodology unlike other brain exercise apps and is already featured in the Top New apps list on the App Store.

Frankfurt AM Main, Germany - AudioBrain, an app like no other, is now available on the App Store and Google Play- but it is not a game. Created for those who want to expand their mental capacity, the new app uses techniques to help arouse under-active brain regions, namely the ones used for processing audio data. It is important to exercise the various regions of the brain to prevent stagnation, and to continue developing audio skills, which helps to increase perception. Unfortunately, as people age, they practice audio memory less and visual perception of information becomes dominant. Through the use of classical poetry, AudioBrain aims to put brain function back in balance.

"People rarely use their audio memory these days," said Alex Melman, developer of AudioBrain. "They mostly use visual memory. Therefore, we created an app that is unique in its kind, with simple and efficient methodology to wake the areas of the brain up which are responsible for audio information comprehension."

Listening to information and repeating it aloud multiple times stimulates auditory processing and helps expand the brain. AudioBrain assists users in repeating poetry by classic authors such as Pushkin, Cervantes, and Shakespeare. The works are narrated by professional native speakers of each language in a recording studio, providing quality sound and a pleasant listening experience. Each poem has a difficulty level, allowing users to improve skills gradually. Users are able to complete a lesson in approximately 40 minutes.

### Device Requirements:

- \* iPhone, iPad, and iPod touch
- \* Requires iOS 7.0 or later

AudioBrain was created by a team of two guys, a developer and a designer, with the goal to create an app that would exercise an individual's memory skills. The resulting product is a uniquely designed memory development app, which involves listening and repeating back classical poetry.
