

## **Quick Scout Volley for iPad, the app that makes volleyball scouting easy**

Published on 09/25/15

Dot Next today introduces Quick Scout Volley 1.0 for iOS, an app designed to make volleyball scouting fast and easy. Quick Scout Volley allows you to track all players actions, shots trajectories and other events of the match, proposing then comprehensive statistics and reports on matches and players. Evaluate all the fundamentals, draw trajectories and annotate other events of the match as the entrance and exit of the libero, time-outs, substitutions and more.

Genoa, Italy - Dot Next today is pleased to announce the immediate availability of Quick Scout Volley 1.0 for iOS, the app designed to make volleyball scouting fast and easy. Already available for the Android platform it arrives today on the iTunes App Store.

The application has everything it needs the volleyball coach to analyze the performance of their teams starting from real-time detection in the field: you can evaluate all the fundamentals, draw trajectories and annotate other events of the match as the entrance and exit of the libero, time-outs and substitutions.

"To propose a volleyball scouting app really new and useful it was essential to solve the complexity, providing complete functionality in a clear interface," says Luca Calcagno, head of design. "The design work started as an analysis of key features of the scouting section. We had to translate the pattern of evaluations of the hits in a graphical summary, usable and beautiful: the solution was found in the evaluation wheel, the tool created to make the user experience linear and straightforward. We then moved on to the design of teams, players and matches management. To obtain a linear and optimized flow which leads the observer and guides him through all necessary data entry we developed sliding panels navigation. Finally, data visualization. All reports and statistics graphs and tables have been designed according to the demands and needs reported directly by skilled coaches and technical staff. Each statistic was designed to be clear and accessible, with a light and contemporary style."

Quick Scout Volley graphics are innovative and optimized in both the scout and data management interface. The main menu is always available and provides access to the different sections of the application. Sliding panels browsing gives immediate access to content and settings.

In the appropriate sections you can manage several teams organized by seasons. For each team you can manage players, each player's card is accompanied by the common fields in the master data, the role, the jersey number and a free field for any notes of the coach.

You can also define different types of competitions (leagues, tournaments, friendly). The statistics section completes the app: they can be sorted by team, player and type of competition.

After the first evaluations you can access the match report in real time. Charts and reports are essential both during the match and after its end. Statistics are essential to understand the performance of the teams and to plan future training and matches. You can check the efficiency of the players in attack and how this value changes according to the rotation in the field and to the setter.

Thanks to its completeness and simplicity this app is suitable for all types of team, professional or amateur, and can handle more teams in different types of competitions, thus proposing as a comprehensive tool for all coaches.
