

Yummy FTP Updates to Version 1.6.1

Published on 08/28/07

Yummy Software is proud to announce the release of Yummy FTP 1.6.1. Yummy FTP is an FTP, FTP SSL/TLS, and SFTP client that combines all the best features available in other file transfer solutions, and adds a wealth of its own uniquely powerful capabilities, and then powers them all with a highly tuned FTP engine. The result is an incredibly fast, flexible and reliable file transfer utility for Mac OS X.

Built as native Mac OS X software from the ground up, Yummy FTP was designed with the goal of providing a reliable, powerful, yet easy to use file transfer utility.

Since its release, Yummy FTP has gained a reputation for being the fastest, most reliable, and most flexible FTP client available.

"Sophisticated FTP client with all the features you could wish for. Highly recommended."

In Version 1.6.1, Yummy Software extends and refines the 1.6 upgrade, providing even more new features and options, extra speed and enhanced reliability

v1.6.1 Highlights:

1. Secure FTP Alias - tamperproof option for the self-contained upload droplet
2. Chinese Localization - simplified and traditional
3. More Speed - engine tune-up for even faster multi-file transfers
4. Better Compatibility - for servers that limit connections and for those which drop them
5. Copy Directory - copy the file listings as a text
6. Improved Schedule - set a start date as well as time
7. Many More Smaller Enhancements
8. Bug Fixes

v1.6 Feature Highlights:

1. Recursive Batch Transfers

Transfer of multiple files and folders is much faster than before.

2. Bandwidth Throttling

Bandwidth Throttling allows you to set a limit (in K's) to how much bandwidth will be used for uploads and downloads. This prevents the possibility of too bandwidth being used, and potentially stopping others on the network from browsing or performing other internet related activities.

3. Free FTP Alias

The FTP Alias feature has been reworked to allow Alias' to be fully self contained. An FTP Alias may now be sent to a client and used to upload files without them needing to purchase or even install Yummy FTP.
