

rubiTrack 2.0 - GPS Enabled Activity Tracking For The Mac

Published on 09/28/09

toolsfactory software today announced the release of rubiTrack 2.0, a GPS enabled activity tracking software for Mac OS X. Utilizing innovative UI technologies, rubiTrack lets you display, analyze and organize your outdoor activities. rubiTrack is for runners, bikers, walkers, hikers, skiers and everyone else who logs GPS data. rubiTrack reads tracks from GPS enabled devices like the Garmin Forerunner, Garmin Edge, AMOD GPS Trackers, Nike iPod, Suunto and Polar devices and the iPhone 3G.

St. Marein, Austria - toolsfactory software announces the release of rubiTrack 2.0, a major new version of its GPS enabled activity tracking software for the Macintosh. Utilizing innovative UI technologies, rubiTrack lets you display, analyze and organize your runs, bike rides, walks, hikes, skiing tours and all other outdoor and fitness related activities.

rubiTrack reads tracks from GPS enabled fitness devices like the Garmin Forerunner, Garmin Edge, AMOD GPS Trackers and Nike iPod, Suunto and Polar fitness watches as well as the iPhone 3G utilizing rubiTrack for iPhone. rubiTrack also imports activities stored in GPX, TCX and many other file formats. Activities are easily accessible through dynamic activity groups which automatically categorize by activity type, location, route, date, distance, workout duration, rating and tags.

rubiTrack 2.0 adds major features such as zones. Zones display ranges of values directly in the track and chart for speed, pace, elevation, heart rate, cadence, power and gradient. rubiTrack now comes with a publishing feature that makes it easy to publish rubiTrack activities online. It now supports visual laps selection, more advance weather data reporting and comes with new activity features like ratings and tags. rubiTrack 2 supports visual track editing for splitting and trimming activities and fixing incorrect GPS data.

rubiTrack comes with visual chart and track features that let you analyze workouts quickly yet thoroughly. You can select areas in the track and view instant statistics. You can set custom markers, measure from any point on the track or chart using the mouse. rubiTrack for iPhone records tracks, manages a recorder history and syncs with rubiTrack for the Mac directly over Wi-Fi.

Main Features:

- * Activity collection with instant track preview
- * Activity calendar and list
- * Direct sync with GPS Devices and file import supporting many formats
- * Interactive maps and charts with instant statistics
- * Intelligent adaptive filtering
- * Activity comparison
- * Uses GPS data as well as heart rate, cadence and power fitness data
- * GPS data export for track sharing and uploading
- * Publishing for putting activities in blogs or online.
- * Athlete history
- * Workout summary for weekly, monthly and yearly statistics

New in this Version:

- * Zones for speed, pace, elevation, heart rate, cadence, power and gradient
- * Completely free configuration of the chart, including the chart type
- * Adds laps preview
- * Activity publishing

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * New weather handling
- * Adds support for Polar HRM file import
- * Adds multi-selection filtering in activity groups
- * And many more

Language Support:

- * rubiTrack is fully localized in English, French, German, Italian and Spanish

Minimum Requirements:

- * Mac OS X Version 10.5 Leopard or higher
- * Universal Binary for PowerPC and Intel
