

The Audio Extractor 2.1 - The 7-in-1 Audio App for Music Lovers

Published on 12/08/15

Dubai-based independent developer, Ammar Salem announces The Audio Extractor 2.1, an important update to his popular audio utility app for iOS devices. The Audio Extractor offers seven music apps in one. The app brings the ability to extract audio from videos stored in a device's Camera Roll. This app also offers a song editor, a voice changer, a BPM calculator, text-to-speech, and music recognition capabilities. Version 2.1 now includes MemoTone an entertaining tone memory game.

Dubai, United Arab Emirates - Independent developer, Ammar Salem is proud to announce the release of The Audio Extractor 2.1, an important update to his popular audio utility app for iPhone, iPad, and iPod touch devices. The Audio Extractor offers anyone the ability to extract audio from any videos stored on their device's Camera Roll. In addition, the app also offers a song editor, voice changer, a BPM calculator, music recognition functions, text-to-speech capabilities, and an entertaining tone memory game.

The Audio Extractor offers 7-apps-in-1, offering a great value to anyone who enjoys working with music and other types of audio. The app is designed to be an all-in-one audio suite, offering multiple ways to work and play with audio. Once users try this app, they'll never look at audio the same way again.

"The Audio Extractor was the first app of its kind on the App Store, with its ability to extract audio from any video stored on an iOS device's Camera Roll," says the app's developer, Ammar Salem. "While this was the app's only function in version 1, it quickly became popular, offering great utility to users around the world. Fans of the app will be pleased to find that version 2.1 of The Audio Extractor offers so much more!"

The Audio Extractor offers seven great functions; it's like getting seven apps for the price of one. The app's features offer users a full-blown audio editing and listening suite in the palm of their hand.

From Vidz:

This feature extracts audio from video, allowing anyone to extract the audio from any video stored on their iOS device's Camera Roll. Users can cut, lengthen, mark in and mark out to select just the right timing, extract, save and share, saving only the portion of the audio they need.

Beat Calculator:

This feature uses the Audio Extractor engine to quickly and efficiently calculate the Beats per Minute of any music, both from your iTunes library, and any music playing around you, live or recorded. Simply select the song from your library, or let the app listen to the live audio source, and it will calculate the BPM of that music source.

Voice Changer:

The app's Voice Changer/Song Editor allows users to record their own voice, or import songs from their music library, and apply a huge variety of effects. Once the audio is perfect, it's easy to share the resulting masterpiece with family and friends. Special effects include a Minion voice effect, echo effects, the ability to speed up and slow down the audio, the ability to add city and nature effects, play audio in reverse, and more.

GeTune Music Recognition:

Working similar to the popular Shazam service, the GeTune Music Recognition feature allows users to simply hold their iPhone up while a song is playing, and allow the app to listen. Within seconds, the app will have identified the song and display the name of the song,

the album it is on, and the artist who sings it. Tap the result, and the app displays a list of YouTube videos associated with the song, ready for viewing. Also included is a handy History function that allows browsing of previously recognized songs.

Text to Audio:

The Audio Extractor app's Text to Audio feature is a powerful, yet simple to use tool that allows anyone to type or paste a text string into the app, and have it read back to them in a clear and natural sounding voice. Users can adjust the speed, tone, and even the accent of the voice playback.

MemoTone - The Tone Memory Game:

This new addition to The Audio Extractor offers a challenging test to a player's musical intelligence. Everyone will enjoy this uniquely challenging tone memory game, where they'll match the blocks according to the tone they make. This unusual game will exercise the participant's brain, while building essential listening skills. This game will be a free update for current owners of the app.

Music Player:

Last, but certainly not least, The Audio Extractor offers up this simple and beautiful music player. The player is designed to be easy to use, and to quickly allow listeners to access their music library for their listening pleasure. It even offers the ability to operated from the iOS lock screen.

"I hate it when I try to use an app, and find there are just too many steps in between me, and what I want to get done," continued Ammar. "That's why I kept The Audio Extractor simple and easy to use, even with it's numerous features, everything in the app is accessible in just a few taps of the screen."

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 7.0 or later
- * 45.4 MB

Pricing and Availability:

The Audio Extractor 2.1 is \$2.99 USD (or an equivalent amount in other currencies) and is available exclusively through the App Store in the Utilities category. Promo codes are available to members of the press. There is also a lite version available.
