

## 24U announces 24U Email OSAX 5.0

Published on 12/10/15

24U Software today releases 24U Email OSAX 5.0, a new version of the popular AppleScript scripting addition for Mac OS X. This scripting addition extends AppleScript with easy-to-use commands to quickly send emails directly from scripts, without the need of any additional applications. With the ability to send multiple e-mails through a single SMTP connection, version 5.0 is now compatible with OS X 10.8, 10.9, 10.10, and 10.11, and is built with the newest version of OpenSSL to support TLS 1.2.

Prague, Czech Republic - 24U Software today is proud to announce the release of 24U Email OSAX 5.0, a new version of the popular AppleScript scripting addition for Mac OS X. The scripting addition extends AppleScript by a few easy-to-use commands to quickly send emails directly from scripts, without the need of any additional applications. The latest version, with ready-to-use examples and ability to send multiple e-mails through a single SMTP connection, is now compatible with OS X 10.8, 10.9, 10.10, and 10.11, and is built with the newest version of OpenSSL to support TLS 1.2.

24U Email OSAX allows AppleScript users to:

- \* Send e-mail directly from AppleScript to avoid learning complicated 3rd party tools
- \* Add attachments with encoding of his choice to be compatible even with old e-mail apps
- \* Send e-mails in background to keep user's script going without waiting for slow SMTP
- \* Send proper HTML e-mails to get e-mails look professional and not considered SPAM
- \* Connect to SMTP using SSL and authentication to protect user's e-mail communication

Peter Crosskey said: "I've been using a Mac for years but never really thought I'd be able to manage AppleScript, until I found that I could speed up routine e-mail transmissions with your software. Thank you."

Ron Bishop from The Kansas City Star wrote: "I use 24U Email OSAX for sending error messages through our email server. Easy to use."

Scott Love assigned a previous version of 24U Email OSAX a 4-mice rating in his Macworld review, writing: "24U Email OSAX 2.2 is a great help. Best of all, it won't break your bank."

HOnza Koudelka, software division manager of 24U, says: "Many e-mail automation tools open a new SMTP connection for every message they send, what makes them very slow. The biggest advantage of Email OSAX is in the way it can send e-mails in background and maintain a single SMTP connection for multiple adjacent messages. It gives you the ability to send e-mails out very fast with an easy to use syntax, but it still lets you construct the e-mail properly to avoid mail servers filtering a legitimate newsletter as spam. I am glad that our team has been able to combine the power of technology with the power of ease of use into a single product so efficiently."

**System Requirements and Compatibility:**

Recommended configuration for 24U Email OSAX 5.0 are Intel Macintosh with Mac OS X 10.10 or newer, minimum supported version of Mac OS X is 10.8.

**Pricing and Availability:**

24U Email OSAX 5.0 is available as a shareware. User can install 24U Email OSAX, and try it out for the period of 14 days free of charge. After this period, 24U Email OSAX can stop working and require a registration code. User will get this code after he pays for a license.
