

Commander Compass GPS Navigation Toolkit Goes Free

Published on 01/15/16

Happymagenta puts its popular land navigation GPS toolkit Commander Compass on sale for free for 3 days starting on Friday, January 15. Commander Compass is an essential GPS navigator for hikers, hunters, boaters, bikers, and to never get lost. Commander Compass comes with a set of essential tools - compass, maps, gyrocompass, GPS receiver, waypoint tracker, speedometer, altimeter, vertical speed indicator, star calibration, gyro horizon, coordinate converter, and more.

Vilnius, Lithuania - Happymagenta offers its land navigation GPS toolkit Commander Compass on sale for free during a special weekend sale from 15th through 17th of January. Commander Compass is great for hunters, boaters, hikers, explorers, travelers, teachers, students, all outdoor enthusiasts, professionals and engineers.

Commander Compass is an essential GPS toolkit for outdoors and off-road navigation. Packed with tools it serves as a hi-tech compass with maps, gyrocompass, GPS receiver, waypoint tracker, speedometer, altimeter, Sun, Moon and star finder, gyro horizon, and coordinate converter. It saves your custom places and waypoints, navigates precisely to them later, shows them on maps, displays detailed GPS info, measures distances, angles, and does a lot more.

Features:

Compass and Gyrocompass:

Accuracy improvement techniques, special compass modes and calibration methods available in Commander Compass only make it a real instrument - the most advanced and accurate digital compass.

Finder, Tracker & Navigation:

Commander Compass operates in 3D to show real-time object positions, info and directions to them overlaid over maps or a simple background. Save current position, add points from maps, manually enter location coordinates and bearings, add stars by hand or use a built-in star catalogue. Find saved places and objects later simply by following directional arrows. Commander Compass tracks multiple targets simultaneously and shows their info - distance, direction, azimuth, elevation and estimated time of arrival. Copy, paste and share locations, coordinates and map links using many supported formats.

GPS, Speedometer and Altimeter:

Find and track your location and get detailed real-time GPS data - coordinates in dozens of formats, altitude, course, current, maximum and vertical speed, using imperial, metric, nautical and surveying units.

Maps:

See your and targets' positions on maps using different map styles and alternative map providers - plan waypoints and measure distances.

Navigate By Stars:

Track positions of stars, Sun and Moon with arc second precision - use them as a reference to calibrate compass for maximum accuracy.

Pricing and Availability:

Commander Compass (iPhone, iPad and iPod touch) is available on the iTunes App Store for free for a limited time (15-17th of January). More information, including screenshots and videos is available on the Happymagenta web site.
