

## WiFiPhoto Brings Easy Photo Download To Any Computer

Published on 10/05/09

Matteo Rossi today released WiFiPhoto 1.1 for iPhone and iPod Touch. With a simple and elegant interface, WiFiPhoto makes it easy to download photos from iPhone and iPod Touch to any computer over a wifi network without USB cables. The application works as a web server to which any computer over the LAN can connect via browser. It's possible to download multiple pictures in a single compressed file with any desired compression quality at full resolution.

Sovico, Italy - Matteo Rossi today released WiFiPhoto 1.1 for iPhone and iPod Touch. With a simple and elegant interface, WiFiPhoto makes it easy to download photos from iPhone and iPod Touch to any computer over a wifi network without USB cables. WiFiPhoto is a fast and straightforward way to transfer photos instead of using emails. The application works as a web server to which any computer over the LAN can connect via browser (all major ones are supported: Internet Explorer, Firefox, Safari, Chrome). It's possible to download multiple pictures in a single compressed file with any desired compression quality at full resolution. The application solves the problem of shrunk photos transferred via email and adds control to finely tune image quality.

Multiple options are available. Server port change makes it possible to face firewall related problems. Users can pick photos from Camera Roll or from Photo Library while adjusting image quality to best fit their needs. WiFiPhoto can be set to transfer a single zipped file as soon as a browser connects to its webpage. A video walkthrough is available at Matteo Rossi's website. WiFiPhoto has been positively reviewed by iPhone App Reviews and is recommended by iPhone Application List. It's been #3 in Top Paid Applications in Italy.

Supported Languages:

\* U.S. English, Italian, Spanish, French, German, Dutch, Japanese and Chinese

System Requirements:

\* iPhone or iPod Touch 3.0 or later
