

Improve Your Productivity With Snippery: The Snippet Editor With a Geek

Published on 03/03/16

AprendeXojo announces Snippery 1.0 for Mac OS X. The app allows any user to securely save and categorize all their snippets of text, from a few lines to very big text fragments: written from scratch, imported from storage media, downloaded as HTML from the specified URL, or with the output obtained from any Shell session done in Snippery's Shell Mode. Snippery's main window is designed to be as clean, fast and functional as possible for the task at hand.

Madrid, Spain - AprendeXojo is proud to announce the release of Snippery 1.0 for Mac OS X, which allows any user to securely save and categorize all their snippets of text, from a few lines to very big text fragments: written from scratch, imported from storage media, downloaded as HTML from the specified URL, or with the output obtained from any Shell session done in Snippery's Shell Mode.

These snippet creation modes are powered with a wide set of text edition operations, RegEx support, and some automatizations, as for example the definition and use of text templates with on-the-fly placeholders substitution. Snippery's main window is designed to be as clean, fast and functional as possible for the task at hand. This way, it is possible to hide some elements, like the main Toolbar, the Tag section and the Find bar, providing the maximum work area for text edition. From the security point of view, Snippery users can activate the encryption of the data, and create as many backups as desired.

Main text edition operations:

- * Add/Remove Line Numbers
- * Add End of Line
- * Concatenate Lines with...
- * Capitalize Words
- * Capitalize Sentences
- * Exchange Characters
- * Change text to Lowercase
- * Change text to Uppercase
- * Prefix / Suffix...
- * Delete Duplicated Lines
- * Repeat Last Line
- * Repeat Last Line with Substitution
- * Shift Right
- * Shift Left
- * Sort Lines
- * Straighten Quotes
- * Trim Lines
- * Trim Selection
- * Export selected Snippets as text or JSON
- * Send Snippet via email

Snippery in Shell Mode

For all those Geeks, Shell lovers out there... There is a really powerful mode inside Snippery that brings all the shell windows you may need to unleash your mojo! From executing remote commands over an SSH session (with password pause detection), and save the resulting output, to type all those arcane commands to list directories or to execute and combine more complex scripts.

The best of all is that you can create your own automated shell scripts from Snippery! No rocket-science needed, just have to add the commands you want to execute and reorder them

in the wanted sequence; you can include even any of the text expansions added to Snippery during the Shell script creation! The "Run Shell" scripts can be created from scratch or using the history of already typed commands from the current Shell session.

This way, it is possible to combine in a single shell script all the power to reproduce a sequence of commands, with the flexibility to vary some of the parameters represented by the placeholders used when defining a Text Expander entry.

Text Expander Editor

Use all the power of this feature to create dynamic templates that can be expanded later typing just a few characters! The Text Expander entries can contain placeholders that you can substitute with the real content during the expansion process. You can think about that like some kind of variables inserted in the template and whose values you'll assign at a later time. This way a same template can expose several key texts when you're ready to use them!

Create new Text Expander entries from scratch or from current text selection!

HTML Preview... and Edition!

Preview every downloaded webpage... and even edit and see on the fly all the changes applied! From one side, this is the best way to preserve the content of a webpage that you are interested in. From the other side, you can find in Snippery a way to sketch HTML ideas and check how they look in real time.

Price and Availability

Regular Edition: currently with a introductory price of 9.99 EUR, Snippery can be downloaded and purchased directly from the AprendeXojo website.

Mac App Store Edition: The Shell mode is limited by the Sandbox feature of the OS X. The price is US \$3.99 and can be purchased from The Mac App Store.

It is possible to download and use Snippery in trial mode too. To do so, get a Trial License from the product webpage. In trial mode Snippery is limited to store a maximum of 10 snippets. Apart from that, any trial-licensed user can enjoy all the app features without limits!

Visit Snippery's Webpage to see more information, screenshots and product videos.

System Requirements:

- * OS X 10.7 or later
- * 7.2 MB
