

Indev Software Releases Updates for MailTags and Mail Act-On

Published on 10/07/09

Indev Software today released 3 updates for its Mail plugins: MailTags and Mail Act-On. Mail Act-On 2.1.4 is a maintenance release for all Mail Act-On 2 users. It remedies minor issues and add Dutch localization. MailTags 2.3.1 is a maintenance release for all MailTags 2 users who work on Leopard Mail. It remedies several issues, particularly with keyword management. MailTags Snow Leopard Compatibility Release 3 is a critical release, fixing numerous stability and functionality problems.

Montreal, Canada - Indev Software today released three updates for its popular Mail.app enhancements: MailTags and Mail Act-On. Mail Act-On 2.1.4 is a maintenance release for all Mail Act-On 2 users. It remedies several minor issues and add Dutch localization. MailTags 2.3.1 is a maintenance release for all MailTags 2 users who work on Leopard Mail. MailTags 2.3.1 remedies several issues, particularly issues with keyword management.

MailTags Snow Leopard Compatibility Release 3 is a critical release, fixing numerous stability and functionality problems with earlier Snow Leopard releases. Indev is making Snow Leopard Compatibility Releases available to provide MailTags users who have upgraded to OS X 10.6 interim functionality until the release of MailTags 3.0, expected this winter. MailTags 3.0 will provide full 10.6 compatibility and sport a new user interface to provide enhance tagging functionality. Customers who purchase MailTags 2 after August 28, 2009 will receive a free upgrade to MailTags 3.0.

Full list of changes
