

List Logic Software releases List Maker 1.0 for iPhone and iPod touch

Published on 10/08/09

List Logic Software today announced List Maker 1.0 for iPhone and iPod touch. List Maker uses revolutionary techniques to allow you to create any type of list, and then view and sort those lists with a simple tap or a swipe. When viewing your lists, you control how much or how little of your information you want to see. Simply tap the bottom middle button to increase or decrease the number of visible columns.

Los Angeles, California - List Logic Software has gone beyond where any other List app has gone before. They have created an iPhone app that lets you keep track of everything you need to keep track of, in a way that is intuitive, elegant, and very very powerful. You decide what kind of list you want to create (Grocery, To Do, Workout, Music, whatever).

You decide what kinds of information you want in that list (Item name, Price, Amount, Date, Picture, whatever). Then you add items to the list in one simple screen. And then comes the real magic: When viewing your lists, you control how much or how little of your information you want to see, by simply tapping the bottom middle button to increase or decrease the number of visible columns. Turn the phone to Landscape to see even more. Then, to view other columns, simply swipe left or right. And to sort, all you have to do is tap the column heading (just like you do on your computer). It has never been this easy to manage lists!

List Maker combines sophistication and an incredibly intuitive user interface to create what may be the single most useful List App on the app store. This is a List App you will actually use!

Feature Highlights:

- * Create lists made up of any number of fields/columns
- * Fields include: text, note, number, decimal, currency, date, time, date&time, phone, email, website, image, switch
- * View as many or as few columns as you like
