

## AI-Based Lost Car Finder TrakCar - Now Even More Feature-filled

Published on 04/22/16

GeniusApps Technologies announces TrakCar 2.2.1, an update to their popular navigation app for iOS and Apple Watch. Using state-of-the-art artificial intelligence technology, TrakCar will automatically detect and record the user's parking location whenever they park their car, without any action on their part required. There are no buttons to press or physical devices to install in the car, and the app uses power-smart GPS technology. Version 2.2.1 offers GUI improvements and minor bug fixes.

New York, New York - Drivers around the world who have fallen in love with GeniusApps Technologies' extraordinarily useful lost car finder app, TrakCar. And people who have yet to download this must-have app to their device, can head to the App Store and download the latest version at no-cost.

TrakCar answers a question that millions of drivers around the world have nervously asked for decades after roaming across parking lots at the mall, airport, beach, or anywhere else: "where did I park my car?" TrakCar solves this age-old riddle with a patent-pending artificial intelligence (AI) algorithm that automatically detects when a user shifts from driving to walking, and as such remembers the exact location of where their car is parked.

Remarkably, there are no buttons to press or physical devices to install in the car, and the app uses power-smart GPS technology so it doesn't drain your phone's battery. TrakCar does everything automatically and in the background, and never sends user data to GeniusApps Technologies' servers or any other third party. And now in the latest version (2.1.1), users can enjoy a range of impressive new features and functions, including:

- \* Improvements to how the app detects parking events - such as when drivers have stopped their car to make a call or send a text, but haven't parked
- \* Enhanced interface readability with sharper, clearer fonts and better use of varying font sizes
- \* Better overall graphics, including maps, icons and more

"Being unable to find a parked car is a very common phenomenon around the world, especially when people arrive in a parking lot when it's barely filled, and return hours later when it's jammed with thousands of cars," commented Agnieszka Swirszcz of GeniusApps Technologies. "What's more, wandering around a parking lot can be a health and safety risk, especially late at night or in certain areas of the city. TrakCar completely eliminates this problem once and for all!"

### Device Requirements:

- \* iPhone, iPad, and iPod touch
- \* Supports Apple Watch
- \* Requires iOS 7.1 or later
- \* 1.6 MB

### Pricing and Availability:

TrakCar 2.2.1 is Free (with in-app purchase) and available worldwide exclusively through the App Store in the Navigation category.
