

PDF Decrypter Pro 1.0 for Mac OS X Offers Easy Decryption of PDF Files

Published on 05/25/16

Developer, Adeptshare today announces PDF Decrypter Pro 1.0 for Mac OS X, their simple to use utility designed to instantly decrypt password protected PDF files. Once decrypted, the PDF file can be edited, printed, and have text and graphics selected and copied into other documents. Users can also edit any annotations & form fields. The decrypted PDF file can be edited in any PDF editor. All versions of Adobe Acrobat are supported, but Acrobat is not required for its operation.

Guangzhou, China - Adeptshare today is proud to announce the release and immediate availability of PDF Decrypter Pro 1.0 for Mac OS X, their easy to use utility developed to decrypt any password-protected PDF files. The app allows anyone to decrypt a protected PDF file, offering them the ability to easily edit, print, select text and graphics for use in other documents, and more.

Occasionally, Mac users will receive PDF documents that are protected via an owner password, which usually restricts a number of actions. Restricted actions can include: editing, printing, copying text & graphics to use in other documents, and more. PDF Decrypter Pro is a compact, simple to use OS X utility created to do one just thing, and to do it well, decrypt password protected PDF files. Following decryption, anyone can make use of the PDF file in any way they wish.

"Encrypted PDF files are difficult to work with, resulting in needless frustration and extra work on the recipient's part," says Adeptshare CEO Zhong Linhua. "Using PDF Decrypter Pro, anyone can quickly and easily remove all password protection from any encrypted PDF document. This allows them to make use of the information contained in the document in any way they wish to."

Features:

- * Quickly decrypts encrypted PDF files
- * Removes restrictions on printing, editing, copying
- * Easy drag-and-drop file selection
- * Handles 40-bit RC4 encryption, 128-bit RC4 encryption, and AES encryption
- * Decrypted files can be edited like any other PDF document
- * Supports the PDF 1.8 format (formerly only supported by Acrobat 9.0)

PDF Decrypter Pro offers easy drag-and-drop file selection, or users can select multiple files via the cleanly designed file selection interface. Once files have been selected for decryption, a simple click of the button immediately begins the speedy decryption process. Users can track the decryption process, which is handily displayed in the Results Column.

PDF Decrypter Pro users love the app:

"Many thanks. A very useful tool. I don't have the full Adobe Acrobat installed on my new laptop, so PDF Decrypter Pro is a great help as I want to remove the restrictions on a particular document right now." - Iain B, DonationCoder user

"Nothing is more annoying than being sent a password protected PDF and having to track down the sender to get the password. Much appreciated. I have re-tweeted this and posted it on my Facebook page." - Tom Draxler

The compact and well-designed PDF Decrypter Pro application can remove various types of encryption, including: 40-bit RC4, 128-bit RC4, and AES encryption. The app also allows removal of editing restrictions from compressed files and unencrypted data. And while the

application doesn't require Adobe Acrobat to be installed for its operation, it is compatible with all versions of the Acrobat application.

PDF Decrypter Pro cannot:

- * Remove or find the user/open password automatically
- * Remove other protections, such as DRM or third-party plug-ins
- * Enable Acrobat Reader to save forms and data locally, add comments, or add digital signatures

"Our app prevents the frustration of needing to recreate a protected file when the password has been lost, or the employee that originally encrypted the document is no longer with the company," continues Linhua. "Retyping the content of a password-protected PDF file is something most users do not want to do. PDF Decrypter Pro saves users the hassle of creating an entirely new document from scratch."

System Requirements:

- * OS X 10.6.6 or later
- * 64-bit processor
- * 10.2 MB

Pricing and Availability:

PDF Decrypter Pro 1.0 is only \$29.99 USD (or an equivalent amount in other currencies), and is available worldwide through the Mac App Store in the Utilities category. It is also available through the PDF Decrypter website. A Windows version of the application is also available. Review copies are available upon request.
