

## **File List Export 2.0 is a Powerful Way to View Mac OS X File Directories**

Published on 06/03/16

Independent developer, Giorgos Trigonakis today announces File List Export 2.0, the important update to his folder and file list exporting utility for Mac OS X. Users can simply select a folder, and the app will create a list of all files and subfolders on screen, and offers the ability to export the list to an Excel .xls. or .csv text file. Version 2.0 brings the ability to export the files list to a folder, as well as the ability to organize the files by kind, file extension, tag, and date.

Athens, Greece - Independent developer, Giorgos Trigonakis is today proud to announce the release and immediate availability of File List Export 2.0, an important update to his folder and file list exporting utility for Mac OS X. With just a click, users can select a folder, and the app quickly creates a list of all files and subfolders in the selected directory. The list can then be viewed on their Mac's screen, or exported in an Excel-compatible .xls file, or to a .csv text file.

File List Export quickly builds a list of any type of file in a directory. Photos, videos, documents, or any other type of file supported by the applications that are installed on the Mac. The app doesn't just offer a list of file names, it also offers a complete listing of metadata for each file, such as: name, title, path, size, and more. Any graphics files listed will show the dimensions of the image, its DPI, color space, and more. With just a quick click of a file name, the app offers a convenient preview of the file, via its built-in file viewing window.

"File List Export has always offered a quick and convenient way to display file information for everything stored on your Mac's hard drive," says developer of the app, Giorgos Trigonakis. "Version 2.0 offers even more flexibility to users, by allowing the exporting of the files list to a folder, as well as offering the ability to organize the files in a number of new ways."

The app supports the display of 42 metadata columns, which can be customized by the user, as to which columns display, what order they're displayed in, and more. Results can be filtered by file type or the built-in filter editor offers the ability to create more complex filters, to display exactly the types of files a user wishes to view the information about.

For every file, users can view the following info: Icon, File name, Date modified, Date created, Kind, Size, Path, Comments, Tags, Version, Pages, Authors/Artist, Title, Album, Track Number, Genre, Year, Duration, Audio BitRate, Audio Encoding Application, Audio Sample Rate, Audio Channels, Dimensions, Pixel Width, Pixel Height, Total Pixels, Height DPI, Width DPI, Color Space, Color Profile, Alpha Channel, Creator, Video Bit Rate, Total Bit Rate, Codecs, MD5 Checksum, and SHA256 Checksum.

"Previous versions of File List Export have rated highly with users, earning a five-star rating in the App Store," shares Giorgos. "I know our loyal users will also love version 2.0, and will continue to support us, and all of our great applications on both the Mac and iOS platforms."

Reviewers and users both love File List Export:

"File List Export does one thing well. It grabs the contents of a folder and exports the list and file metadata to an Excel spreadsheet or a CSV file. And... we're done. [...] The Finder-like, spreadsheet-like list of file name and data can be impressive and contains all sorts of useful information, some of which you never knew existed." - Mac360

"A classic example of an application that performs a single task but it plays to the fullest." - App store review, Italy

"Sometimes the simple applications are the best." - App store review, United States

File Export List 2.0 is a app that does only one thing, listing the files and their information in any selected Mac OS X directory. However, the app strives to perform that one task as efficiently and comprehensively as possible, offering a customizable and flexible method of viewing filenames and metadata for any file on a Mac's hard drive.

Device Requirements:

- \* OS X 10.8 or later
- \* 64-bit processor
- \* 14.7 MB

Pricing and Availability:

File List Export 2.0 is only \$4.99 USD (or an equivalent amount in other currencies), and is available worldwide exclusively through the App Store in the Productivity category. Review copies are available upon request.
