

## Zevrix Deliver Now Supports Microsoft Exchange Email Servers

Published on 07/27/16

Zevrix Solutions announces Deliver 2.5.6, a feature update to its file transfer solution with automatic email notifications. Deliver lets users send files to FTP, SFTP, Google Storage, Amazon S3, WebDAV and other remote and local servers. The software notifies recipients about delivered files automatically, eliminating the need to compose and send confirmation emails for each transfer. The new version lets users send automatic email delivery notifications via Microsoft Exchange SMTP servers.

Toronto (ON) Canada - Zevrix Solutions today is proud to announce the release of Deliver 2.5.6, a feature update to its file transfer solution for remote and local destinations. Deliver lets users send files over the Internet and local networks with automatic email notifications, file compression, delivery history and other powerful time saving capabilities. It supports FTP, Google Storage, Amazon S3, WebDAV and other remote and intranet services.

The new version lets users send automatic email delivery notifications via Microsoft Exchange SMTP servers. This ability is especially useful in corporate environments where email servers are set up to not allow authentication over a plaintext connection.

"Deliver gives plenty to like," writes Natalia Nowak on Mac360, a Mac app reviews site. "It's a secure document delivery system with tracking built in, and straightforward and comprehensive user interface."

Deliver quickly gains popularity as file delivery tool of choice at ad agencies, printers, recording studios and publishing houses. Users can create hot folders or drop files onto the program icon, and the items will be delivered automatically with customizable email confirmation issued upon delivery. The files can be easily retrieved through the link in notification email.

Deliver offers the following key features:

- \* Send files to FTP, SFTP, WebDAV, Amazon S3, Google Storage and locally
- \* Automatic variable email notifications
- \* Hyperlink to file for instant download by recipients
- \* Compress files automatically
- \* Create lo-res PDF on the fly and attach to e-mail
- \* Delivery history

Pricing and Availability:

Deliver can be purchased from Zevrix website for \$19.95 (USD), as well as from Mac App Store and authorized resellers. Trial is also available for download. The update is free for licensed users of Deliver 2.x. Deliver requires Mac OS X 10.5-10.11 (some features require OS X 10.7 or later).
