

The largest iOS 10 course has just been released - Get it now for \$9

Published on 09/15/16

Mammoth Interactive has just released the largest iOS 10 course clocking in at 100 hours. Learn how to develop apps from scratch. No experience necessary. This course is jam-packed with fresh, relevant and profitable material. It is the best way to learn how to code and become a fully experienced app developer. If you're an experienced developer or a new player in the game, this course will provide you with everything you need to know about iOS 10 development.

Vancouver Canada - Apple has just released iOS 10! To help you learn the ropes, Mammoth Interactive has just released a 100-hour course that shows you how to build apps from scratch. Not only is this the largest iOS course ever produced, it's also freshly updated with pure iOS 10 content. In this course you will learn how to code, design fantastic apps and learn how to profit off of your new skills.

Starting today, we are holding a sale for all early adopters of this Mammoth iOS 10 course. You can get all 100 hours for just 9 dollars (reg 500). This course is jam-packed with fresh, relevant and profitable material. So, if you're looking to learn how to program, build apps from scratch and become an app developer, this course is for you. With 100 hours of content, this course offers you in-depth information on everything to do with iOS 10. If you're an experienced developer or a new player in the game, this course will provide you with everything you need to know about iOS 10 development.

If you haven't already heard about Apple's new programming language Swift, it is the successor to Objective-C. Swift is much easier to use and understand than Objective-C, so that means you can get your app on the App Store quicker. By the end of this course, you'll have become proficient with Swift syntax, functionality, and concepts. By specializing in Swift, you will give yourself many opportunities and this will help you net a high-paying job that could result in a profitable career in app development. The course covers topics like Xcode basics, frameworks, and core iOS features. In addition, you will learn how to design apps in Adobe Illustrator and Photoshop. Most beginners do not know how to design apps and as a result their apps look amateurish. This course will show you how to easily design apps that look professional. Don't let your hard work be marginalized by bad design!

Whether you're a seasoned app developer or someone who is just entering the industry, the timing is just right. Most coding jobs in the United States are currently left vacant because there are not enough qualified applicants. You can become one of these applicants if you learn how to build relevant skills by releasing practical projects.

Mammoth Interactive has a unique and effective way of teaching people how to code. They teach by allowing people to build practical projects that they can release by themselves. You can literally go through an app building section of our course and upload that app to the App Store.

By releasing multiple projects, you will not only gain experience, but you can add all of those projects to your LinkedIn, portfolio and resume. This is the secret that nobody wants you to know. Most schools, universities and colleges don't teach this way. How is a multiple-choice test going to help you become a better app developer? It can test your knowledge, but to fully become an app developer, you need much more practical skills.

Mammoth Interactive's unique approach is borrowed from other disciplines where virtuosos thrive. No other course will help you become a coding or app development virtuoso. Mammoth's CEO John Bura has been refining this concept for many years. What he has done is

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

looked at how virtuoso musicians, actors, writers and filmmakers release monumental projects with minimal effort. He has adapted their techniques to the world of coding, and is passing this valuable information on to his customers. Most other coding courses and programs do not offer this information at all.

Students from Mammoth Interactive's previous courses have uploaded apps to the App Store and have become quite successful. John Bura has released multiple apps, and several have risen to the top ranks of the App Store. With over 250,000 students worldwide, Mammoth Interactive has a long lasting reputation for creating cutting edge and practical content.

"This is by far the best course we have ever released!" says John Bura. "I'm excited to see the impact it will have on people's lives." The team at Mammoth Interactive has grown, and this course was produced in collaboration with other genius instructors. By adding other instructors, they were able to add multiple levels and perspectives, making this the most comprehensive iOS 10 course out there. This course is bigger than any other iOS course on the market combined.

Mammoth Interactive is also constantly updating the course, which means that you will receive periodic updates. When you buy this course - you gain lifetime access to it. There are no subscription fees or other payments. It's just a one-time payment. You also get all of the source code and templates of the projects when you buy this course.

Are you ready to become a virtuoso app developer? Ready to start your career in app development? Do you have a million dollar idea that needs to get to the App Store? Get this course for just 9 dollars (reg. 500) and bring your ideas to life. This sale ends soon - so don't miss out!
