

myTuner Radio - Major release of version 5 for iOS and Android

Published on 09/23/16

AppGeneration Software today announces myTuner Radio 5.0.1, an important update to their popular live radio app for iOS and Android platforms. With myTuner Radio, you can listen to more than 30,000 live AM, FM and Online radio stations from over 150 countries and 1 million podcasts. Now you can listen the best radio stations of your country or of your homeland when you are abroad. Version 5.0.1 brings exciting new features and a revamped design.

Porto, Portugal - myTuner Radio team has been working hard during the last months to give our users the ultimate experience when it comes to listening to the radio. We are proud to announce that version 5 of myTuner Radio is now live for iOS and Android platforms and it brings exciting new features and a revamped design. With myTuner Radio, you can listen to more than 30,000 live AM, FM and Online radio stations from over 150 countries and 1 million podcasts.

We are music lovers, so our first and most relevant effort in this new version, was to improve the experience of radio and music listening inside the app. We added some new cool features like a new player page for each station/podcast with additional information about it, related and suggested stations/podcasts and a cover art for each song that is playing.* Plus, you can add your favorite songs to favorites or buy them later on. We have also changed the home screen, added bigger logos and tabs, so now it's much easier to navigate between the radio stations.

This new version brings an even larger database of radio stations, with more than 30,000 radio stations available in 150 countries, which is continually being updated on a daily basis, to make sure users always get to listen to their favorite radio stations. The new and gorgeous design with a "glow" effect is also something that our users will certainly appreciate. The myTuner community truly deserves the constant effort that we are making on a daily basis, since we have reached an astounding number of 25 million historic users!

(* Only available in some stations)
