

Hear My Baby Pregnancy App Hits #1 on the UK App Store Charts

Published on 10/03/16

UK based Fat Cigar Productions Ltd today announced that Hear My Baby - Heartbeat Monitor Pregnancy App 1.0.4 has made it to number 1 on the App Store paid downloads category in 8 countries, and has been the number 1 app in the UK for the last two weeks. Featuring an advanced audio recording system, this unique app helps expectant mothers to simply and easily hear their baby's heartbeat by pressing the microphone from their iPhone up against their tummy.

Winchester, United Kingdom - Fat Cigar Productions Ltd today is thrilled to announce that Hear My Baby - Heartbeat Monitor Pregnancy App has made it to number 1 on the App Store paid downloads category in 8 countries, and has been the number 1 app in the UK for the last two weeks. Some mothers have even reported stunning results - hearing heartbeats as early as 17 weeks.

Reviews:

"Such an amazing app.' by CHARLOTTEJLW:

Honestly before I got this I didn't believe it would actually work, read the reviews and thought id give it ago before buying the expensive ones in the shop. When I heard a beating sound which sounds like a train chugging, I thought no, can't be. Then I put it on my heart and it picked mine up, then different places on my body and it didn't pick anything up. It seriously calmed my nerves before my scan and I honestly highly recommend this app!! (I am a big girl and it still picked the baby's heart beat up, every morning and night)"

"It does actually work!' by odibdabo:

I must admit I was very sceptical about this but after reading the reviews I thought I would give it a go. It took a few attempts to find the baby but it definitely does work! Lovely to be able to hear little one and for my husband to be able to be involved too."

Best In Class:

It is the best-in-class, pregnancy app developed for iOS devices. Beautifully designed, Hear My Baby helps expectant mothers to simply and easily hear their baby's heartbeat by pressing the microphone from their iPhone up against their tummy.

The one-touch record feature makes it simple to record once the heartbeat has been found, and then our advanced audio recording system has been engineered to specifically identify the heartbeat range of the baby and then amplify the heartbeat sound it so it can be recorded and shared via email or Facebook. This is extremely difficult to do well, and has taken considerable testing and re-engineering to perfect.

The number of weeks pregnant can be recorded and a selfie taken to remind of the time and date it was taken (and the size of the tummy!), and of course the easy share feature allows posting on facebook pages, groups or timeline. The mother's privacy is completely protected and no recordings are stored on the developers servers, meaning that unlike other apps in this category

It is a fantastic way to bond with the baby, increase the involvement for siblings, husband and grandparents. Please note, this is not a medical device and should not be considered as a substitute for medical advice or opinion. Always use the app in Airplane mode.

Device Requirements:

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * iPhone, iPad, and iPod touch
- * Requires iOS 9.0 or later
- * 14.1 MB
