

Spy Hidden Camera Detector Updated with Improved Detection Capability

Published on 10/17/16

ALP Digitech today announces Spy hidden camera Detector 5.0, an update to their popular app utility for iOS devices. Spy Hidden Camera Detector is an innovative, elegant and essential solution to the growing problem of illicitly placed hidden cameras. In manual mode, users who suspect the existence of a hidden camera simply scan the room with their iPhone. In Automatic mode, the app puts a markers where it detects a camera lens may be present. Version 5.0 offers improved automatic detection.

Vancouver, Canada - People who want to reclaim their privacy and security from the growing number of cyber criminals, snoops and voyeurs out there armed with hidden cameras, should head straight to the App Store and get the recently-updated app Spy Hidden Camera Detector.

Created by ALP Digitech, Spy Hidden Camera Detector is an innovative, elegant and essential solution to the growing problem of illicitly placed hidden cameras in fitness clubs, homes, change rooms, hotel rooms, showers, and the list goes on. The app has two modes: manual and automatic.

In manual mode, users who suspect the existence of a hidden camera simply scan the room with their iPhone. When they detect something suspicious, they tap their screen and place a marker. When finished scanning, they point their device at the pre-marked areas and wait a few seconds as the app turns their camera's flash on and off. Ultimately, this process reveals one of two overlays: yellow, which suggests that the surface of a tiny and concealed object is likely metallic or glass-like; and cyan, which suggests that the surface could be a camera lens.

Automatic mode - which has been improved in the latest version 5.0 - attempts to accomplish the same objective as manual mode. However, instead of users scanning the room themselves, the app takes over and puts a marker (or markers) where it detects a camera lens may be present. Users can zoom their camera in/out and change the distance/angle of their device based on the size of the room, and the type of results they are getting.

Other key Spy Hidden Camera Detector features include:

- * Multiple customizable settings, including flash cycle, sensitivity, and number of detectors
- * The option for users to take a snapshot of a suspected hidden camera, and share it via email or SMS
- * The option to pinch and zoom on photos to get a closer look

"Essentially, Spy Hidden Camera Detector has all of the features and functions of anti-spy gadgets that often cost over \$100 from Amazon and other retailers," commented a spokesperson at ALP Digitech. "At the same time, since people typically carry their iPhone wherever they go, they always have app with them and can therefore stay one step ahead of people who want to invade their privacy and security."

Device Requirements:

- * iPhone, iPod touch and iPad Pro
- * All iOS devices with a camera flash
- *
- * 8.4 MB
