

ChronoSync 4.7.4 Improves Sync Efficiency and Performance

Published on 03/08/17

Florida based Econ Technologies today releases ChronoSync 4.7.4 for macOS. ChronoSync is the multipurpose app for local and cloud backup, bootable clones, and folder synchronizing. ChronoSync can synchronize or backup to most anything you can connect to your Mac, including folders on your Mac, other Macs, PC's, and external drives. Version 4.7.4 offers performance and efficiency improvements, including fixes for a handful of bugs.

Casselberry, Florida - Econ Technologies improves ChronoSync with the release of version 4.7.4, featuring more efficient memory usage, better performance, and detailed attention to subtle sync operations. ChronoSync, the premier sync, backup and bootable backup tool for macOS has undergone detailed analysis and testing to identify and quash minor memory leaks and eliminate unneeded memory consumption. Furthermore, Amazon S3 and Google Cloud sync and backup performance now benefits from reorganizing normally sequential operations into parallel algorithms to better leverage cloud processing for object copy and destroy operations.

Other under-the-hood changes include improvements to preservation of resource forks when syncing to the cloud, better document save performance, better relocated volume identification and new fall-back logic to avoid common error conditions. These improvements along with several bug fixes improve upon the trusted and efficient ChronoSync. This update, as with all ChronoSync updates, is free to existing owners of ChronoSync!

Did you know ChronoSync can help protect you from ransomware? The answer to this question and many more is available when you explore the many ChronoSync resources regularly published by Econ Technologies. In the latest "Protecting Your Mac From Ransomware" Guide, Econ Technologies explains how to use ChronoSync to create a backup strategy that helps protect your data not only from device failure, but from threats of the modern online world. Stay up-to-date with great tips on getting the most out of ChronoSync with this and other publications from Econ Technologies.

ChronoSync, the multipurpose app for local and cloud backup, bootable clones, and folder synchronizing, is designed to work on macOS version 10.8 and newer. Full working trial licenses are available, or purchase ChronoSync for \$49.99 (USD). ChronoAgent allows any Mac to accept direct, secure connections from any ChronoSync Mac or any InterConneX iOS device so you can access or transfer your data! Full working trial licenses are available, or purchase ChronoAgent for \$14.99. ChronoMonitor is an iPhone app that monitors Macs running ChronoSync or ChronoAgent. ChronoMonitor is available in the Apple App Store for \$3.99.
