

Nodhead Software releases Warranty Hero 1.4.5 - Products and Receipts

Published on 10/21/09

Nodhead Software today is proud to announce Warranty Hero 1.4.5, a major update to their product and warranty utility for Mac OS X. Warranty Hero allows anyone to manage receipts quickly and easily keep track of a products life-span and its accompanying warranty guarantee. With a focus on ease-of-use, adding new product information is as simple as entering its name, vendor, purchase date and a time the warranty expires. Optional information for serial number, price, product image.

Aschaffenburg, Germany - Nodhead Software today is proud to announce Warranty Hero 1.4.5, a major update to their product, receipt and warranty utility for Mac OS X Leopard. Perfect for business and personal use, Warranty Hero allows anyone to quickly and easily keep track of a products life-span, receipt and its accompanying warranty guarantee.

New in features 1.4.5 are:

- * Automatically selects newly inserted products
- * Way better performance for users with 100 products
- * Bugfixes
- * Russian and Ukrainian localization Final
- * Thanks to Andriy Nykyforuk, we paid special attention to 3 level word evaluation

Warranties are a fickle thing. We all rely on the standard one or buy extended warranties for the added insurance in case a product fails prematurely. But it's hard to remember when the warranty runs out and where all the receipts and Warranty stuff is. This is where Warranty Hero can be incredibly useful. With a focus on ease-of-use, adding new product (or service) information is as simple as entering its name, vendor, purchase date and a time the warranty expires.

Optional information for serial number, price, and product image can be entered as necessary, as well as the ability to Drag & Drop receipts as a PDF and add Keywords. Receipts can be viewed with QuickLook and printed directly from within the application. And to make Warranty Hero the center of all things warranty and PDF, it is also possible to take notes for each product. The new notes feature allows styling, bolding and font types, as well as detects Hyperlinks automatically.

To keep track, the application offers a Remind Me feature that automatically sets up a Warranty Hero Calendar in iCal as well as the provision to optionally set a reminder for each product. To get reminded on iPhone or iPod, simply synchronize the Warranty Hero Calendar in iTunes. All synchronization is handled natively, without relying on any third party software.

Language support:

- * U.S. English, German, French, Traditional Chinese, Simplified Chinese, Italian, Ukrainian and Russian

Minimum Requirements:

- * Mac OS X Version 10.5 Leopard or later
- * Universal Binary for PowerPC and Intel
- * 21.2 MB Hard Drive space

Pricing and Availability:

Warranty Hero 1.4.5 is available for \$14.95 (USD). Users may purchase from the application directly. Household Licenses are available for \$19.95 (USD).
