

## Network Speed Tester apps for all Apple devices

Published on 06/01/17

Lakehorn AG today introduces the full suite of Network Speed Tester apps for all Apple devices. Network Speed Tester lets users measure and visualize network and WiFi performance between any current Apple device on the same network. It will detect weakspots or bottlenecks on the local WiFi or wired network and can help improve overall network performance. Results are displayed in a graph in realtime, so that any change is visible immediately.

Bern, Switzerland - Lakehorn AG is pleased to announce the release of the full suite of Network Speed Tester apps for all Apple devices. Network Speed Tester lets users measure and visualize network and WiFi performance between any Apple device on the same network.

Advertised and actual networks speed can vary quite a lot - this is why we've created the Network Speed Tester suite of apps, to dig deeper, and find weak spots or bottleneck in any network. In larger houses, WiFi-repeaters are used to improve the range of the WiFi signal, but sometimes the actual performance gets worse because of bad placement or configurations. This can all be detected by Network Speed Tester.

We use client-server technology to measure speed, i.e. various amounts of random data is sent between devices, to get accurate real-world results. The results are then displayed in a graph in realtime, so that any change is visible immediately. E.g. The user can walk around to house and find the best spots for video streaming. Or he moves or even just tilts the WiFi router to see changes in speed.

Network Speed Tester requires any two devices to operate. One device will act as the server using the server app (on iOS or tvOS) or the combined app on macOS. From the second device, the client app will connect to the server via Bonjour and visualize the results.

### Main features summary

- \* Accurate performance measuring of WiFi or wired networks using client-server technology
- \* Get actual realworld network throughput
- \* Graphical visualisation
- \* Find test servers automatically via Bonjour services
- \* Export data to tab text format (macOS only)
- \* Share results

### Language Support:

Network Speed Tester is currently localised for english and german language.

### Device Requirements:

- \* Compatible with Macintosh, iPhone, iPad, iPod touch, and Apple TV 4
- \* Requires macOS 10.10 , iOS 9.0 , tvOS 9.0
- \* Universal application

### Pricing and Availability:

Network Speed Tester for Mac is a \$3.99 download available worldwide through the Mac App Store in the Utility category. The client app for iOS/tvOS is a free download worldwide. The server app for iOS/tvOS is a \$1.99 download also available worldwide.
