

Output Factory for InDesign Improves Page Number Handling in File Names

Published on 07/11/17

Zevrix Solutions announces the release of Output Factory 2.0.4, a maintenance update to company's output automation solution for Adobe InDesign. Output Factory automates printing and exporting from InDesign and offers batch processing, export as single pages, layer versioning, variable file names, and other productivity-enhancing features. The new version ensures that automatic page numbers in text frames on master spreads are correctly parsed for their usage in variable names of output files.

Toronto (ON) Canada - Zevrix Solutions today is proud to announce the release of Output Factory 2.0.4, a maintenance update to company's output automation plug-in for Adobe InDesign. The software solves the problem of printing and exporting of multiple InDesign files, eliminates repetitive production tasks and ensures error-free output through automated preflighting.

The new version improves the reliability of plug-in's advanced variable name engine that allows to insert specific content of InDesign documents into the output file names. The update ensures that automatic page numbers in text frames on master spreads are correctly parsed for their usage in the variable names of final exported documents. This option is especially helpful for users who need to split InDesign documents into single pages or spreads while naming the output files with their respective page label.

"I want to say how valuable and useful Output Factory has been for our company," says Ed Saye, studio manager at Blue Sky Agency in Atlanta, Georgia. "The folks that use it are delighted to have a way to automate so much repetitive work in a consistent and organized way."

With Output Factory users only need to select InDesign files, adjust output settings, and the software will do the rest automatically. The plug-in supports all popular output formats and offers the following key features:

- * Batch output of InDesign files
- * Supports print, PDF, PostScript, EPS, TIFF, EPUB and other formats
- * Export InDesign files as single pages/spreads
- * Layer versioning: export layer combinations as single files
- * Variable output file names
- * Run custom scripts during processing
- * Output to several formats at once
- * Automatic preflight

Pricing and Availability:

Output Factory can be purchased from Zevrix website for \$169.95 USD (Lite version \$120, Server \$700), as well as from authorized resellers and Adobe Exchange. Trial is also available for download. The users of Output Factory 1.x and BatchOutput can upgrade to Output Factory 2 for \$85 (Lite version - \$60). Output Factory requires macOS 10.7-10.12 and Adobe InDesign CS5-CC 2017.
