

Math: Unknown 1.0.0 - A step-by-step math learning game for iOS

Published on 08/14/17

Independent developer, Suparerg Suksai today introduces Math: Unknown 1.0.0, his new step-by-step math calculation game for iOS devices. Math: Unknown aims to teach users how to calculate in the correct order rather than just asking only the final calculated results. The app helps users to visualize the process of calculations as how it will be done on paper. Math: Unknown consists of four basic arithmetic operations which are addition, subtraction, multiplication and division.

Samut Prakarn, Thailand - Independent developer, Suparerg Suksai today is proud to announce the release and immediate availability of Math: Unknown 1.0.0, his math learning app developed exclusively for iPhone, iPad and iPod touch devices. Math: Unknown is much more than a math game. It is a step-by-step math calculation game which will teach users how to calculate in the correct order rather than just asking only the final calculated results.

The app consists of four basic arithmetic operations which are addition, subtraction, multiplication and division. In order to get started, users who are new to arithmetic can learn from animated calculation guides showing step-by-step procedures of solving each type of operation. It is also helpful for experienced users as a quick reference.

Generally, addition and subtraction may be difficult for users who just start learning math especially when questions require carrying or borrowing (also called regrouping). The app helps users to visualize the process of carrying and borrowing in the way it will be done on paper. Once users understand how these operations work, they are ready to learn multiplication and division.

For most students, division is considered as the most difficult arithmetic operation to solve. It is a common area of struggle since it requires prior knowledge of both multiplication and subtraction. To help users understand division, the app uses long division to teach all calculation procedures. Relevant multiplication table will be shown beside the question. Users will have to pick a number from the table which go into the dividend. Multiplication of selected number and divisor is automatically calculated, but the users have to do subtraction and drop down the next digit themselves. Learning whole calculation processes will make them master it in no time.

Math: Unknown is a helpful app for students who seriously want to improve arithmetic calculation skills.

Features Include:

- * Step-by-step calculations as doing it on paper
- * Visualized borrowing and carrying processes.
- * Wrong answer will always be corrected
- * Calculation guides for quick reference
- * Multiplication table
- * Unlimited number of questions
- * Progress Summary of each 4 main operations
- * Number of wins vs total plays as well as winning percentage of each level
- * Game Center - Leaderboards and Achievement
- * Feel-at-school theme: blackboard, chalk and hand-drawn font

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 8.0 or later

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Universal Application
- * 44.1 MB

Pricing and Availability:

Math: Unknown 1.0.0 is \$4.99 USD (or an equivalent amount on other currencies), and is available worldwide exclusively through the App Store in the educational games category. Promo codes are available to members of the press. For more information, please contact Suparerg Suksai.
