

## **CREATEit 2.0 - iPad App for Producing and Presenting Compelling Visuals**

Published on 08/16/17

NeoNet Corp announces CREATEit 2.0, an important update to their presentation creation app for the iPad. CREATEit makes it easy to design compelling visuals that you can share with your friends. This includes video, image, audio, PDF, maps, slides, items and WebSonar Library links. Just touch and hold to select graphic items, paint brushes and typefaces. First Dream it then CREATEit. Version 2.0 brings new capabilities to this popular productivity app including an extensive help file.

Salmon Arm, Canada - NeoNet Corp is proud to announce the release of CREATEit 2.0, designed specifically for the iPad, to provide the user with an intuitive and versatile tool set to easily present new ideas to an audience. You can simply add captions and graphic items to your photos for sharing or, AirPlay to an AppleTV, to dynamically present your stories in a very unique and compelling way.

CREATEit provides the means to view, create, store, share and acquire content. This includes video, image, audio, PDF, maps, slides, items and WebSonar Library links. Viewed content can be uploaded to a WebSonar Library. Groups of items can be exported and uploaded to a Content Library where they can be imported by any other CREATEit app client that has access to the library. These shared resources can include items, slides or WebSonar Library links.

CREATEit provides four overlapping layers that can be used for your presentation. The bottom layer is where the background scene is placed. This image can be loaded from a file or can be created ad hoc with your iPad camera. The second layer can be used to apply paint to the background.

The third layer or stage is where the cast members are placed over the background scene and paint. These items can be moved, rotated and resized at any time. Items on the stage also have properties that can be set, such as: transparency, horizontal orientation, sound control, or deletion. You touch and hold an item to display it's property menu.

The fourth layer or foreground can be used to paint on top of the stage and included items. Paint layers can be edited or deleted without affecting the background scene and cast members can be moved on the stage without affecting the applied paint.
