

NetShred X Updated for Firefox 55, Chrome 59 - Version 5.1 Released

Published on 08/25/17

Mireth Technology announces a new release of NetShred X, its internet eraser software for macOS. Version 5.1 adds support for Firefox 55 and Chrome 59. NetShred X is an easy-to-use internet eraser app for Mac that clears files web browsers and email programs leave behind. NetShred X is designed to run automatically, without user intervention.

Richmond, Canada - Mireth Technology Corp. has released version 5.1 of NetShred X, its easy to use internet eraser app that erases browsing data. NetShred X runs on macOS. Version 5.1 adds support for Firefox 55 and Chrome 59.

NetShred X is an easy-to-use internet eraser app for the Mac that clears files web browsers and email programs leave behind. And like all Mireth Technology apps, it is designed to be easy to use.

Because internet privacy software can't be effective if it's not used, NetShred X is designed to run automatically, without user intervention. And since browser data like erasing browser cache, history, email trash and junk can take some time, NetShred X is designed to run in the background, so using the app doesn't interfere with web browsing.

Most importantly, NetShred X is an effective method of permanently deleting internet browsing data and email tracks. This is a cleaner solution than just deleting the files, because it ensures that the data can't be recovered.

Pricing and Availability:

NetShred X is available for immediate download, or on CD-ROM, starting at \$24.95 for an annual subscription. Educational pricing and volume discounts are available. NetShred X runs on Mac. For more information about NetShred, visit the Mireth website.
