

## MaBaSoft Releases Application Wizard 3.6.4

Published on 10/02/17

MaBaSoft announces Application Wizard 3.6.4, a minor update to their popular menu-based application launcher, quitter, and switcher for macOS. With Application Wizard users can quickly open and quit applications, switch between running applications, browse volumes and folders, access favorite and recent files, look up contacts, and preview images, music, movies, and documents. Version 3.6.4 solves the incompatibilities with macOS 10.13 High Sierra.

Milano, Italy - MaBaSoft announces the release of Application Wizard 3.6.4, the latest version of their popular menu-based launcher, quitter, switcher, and navigation tool for macOS. Application Wizard allows users to create groups of applications to easily access favorite applications and quickly open or quit multiple applications at the same time. It allows smooth switching between running applications and open windows and provides single application mode to reduce screen clutter.

With Application Wizard, users can also browse volumes and favorite folders to rapidly open enclosed items, eject and mount disks, check memory usage, and easily access recent documents and contacts. Application Wizard previews images, music, movies, and documents and displays file properties and metadata.

Finally, Application Wizard allows users to define keyboard shortcuts so that they can quickly accomplish frequent tasks by pressing keys on their keyboard. Shortcuts can be used, for instance, to quit all running applications, or switch back to the previous application, or turn single application mode on and off.

Version 3.6.4 solves the incompatibilities with macOS 10.13 High Sierra.

Language Support:

\* US English, German, French, Dutch, Spanish, and Italian
