

Photo Print 4.0 - Photo Format and Printing for macOS

Published on 10/10/17

Minnesota based True North Software today introduces Photo Print 4.0, their photo printing application for macOS. Photo Print features a drag-and-drop layout oriented user interface. This easy-to-use solution allows you to place photos into frames, and adjust both images and frames positionally with effects, such as borders and image filters. Photo Print supports layered layouts, borders, shadows, filters and effects, styled text, and custom templates.

Plymouth, Minnesota - True North Software today is proud to introduce Photo Print 4.0, their photo printing application for macOS. Photo Print is an application designed to transform your photos into print. Photo Print is as simple as drag and drop. You drop in a template, drop in your photos, adjust the photos as desired, and then print. Let's say you have a family party where you snap some photos and then you want to print them out for your guests.

After you load them into Photos, you can then just drag and drop pictures into predefined Photo Print frames and then hit the print button. Or say you want to print out school pictures, Photo Print again makes the task easy and swift. After you finish sizing and positioning the photos, you are ready to print! It is that easy! Photo Print also has built-in filters that you can apply to your photos to make quick adjustments which leaves your originals untouched. Photo Print is a layout driven program and you can even create custom layouts and frame sizes.

What's New for Version 4.0:

Photo Print has been completely rewritten from the ground up. You will find it is far more capable than previous versions of Photo Print. It is also significantly faster and can deal with a lot more photos. With this version of photo print you can now save your creations as Photo Print documents.

Major Features:

- * Layout driven drag-and-drop interface
- * User defined Layouts
- * Image filters and effects
- * User defined borders
- * Easy to use positioning and resizing

Details:

- * Layouts and Frames: Position, Size, Rotation, Borders
- * Text: Styled Text
