

MacX Video Converter Pro released - Now Supports Faster HEVC Conversion

Published on 12/06/17

MacXDVD Software today releases MacX Video Converter Pro, an important feature update to their flagship video conversion utility for macOS. MacX Video Converter Pro is a feature-packed HEVC video converter that can compress and convert 4K/multi-track HD videos to HEVC/H.265 to save storage space and bandwidth consumption. This update extends its profiles for HEVC for seamless playback on newer Macs, and lower-capacity iPhones and iPads, while significantly saving storage space.

Chengdu, China - MacXDVD Software proudly announces that its ace MacX Video Converter Pro

has risen as the world's most stable, powerful and fastest HEVC converter. Two kernel updates completed lately are some of the factors that make it take the reins in HEVC encoding and decoding: one is being the forerunner to add HEVC into the supported video codec list, and the other is ensuring a stable and fast HD/4K video conversion to HEVC MP4, tailored to end the video incompatibility issue with newer Macs, and space-constrained iPhones and iPads, without eating up all available space.

MacX Video Converter Pro makes breakout success in HEVC video converting. For more information, please visit MacXDVD official site.

The transition from high definition video to space-hogging 4K video gives rise to a speedy adoption of HEVC, and end heavy bandwidth consumption and large space occupation. Known as

a more efficient video compression standard that delivers identical quality with half the file size of H.264, resulting in significantly higher quality at any fixed bandwidth, HEVC (aka H.265) is ready to rock and roll. Apple jumps on the HEVC bandwagon in the latest iOS 11 and macOS High Sierra, a while back hardware HEVC encoders and decoders are built into new phones, cameras, PCs, TVs, and more. Netflix is also upping its game to HEVC for easier 4k video streaming. The exception to this rule is software HEVC encoder and decoder is still immature, though urgently demanded. But MacX Video Converter Pro gets hands on both HEVC decoding and encoding as follows:

Decode HEVC/H.265 videos for better compatibility:

With as many as 370+ video/audio codecs, the latest version works as a HEVC decoder that will aid you to decode and convert any videos including HEVC/H.265 to H.264, MP4, MKV, AVI, WMV, MPEG4, FLV, MTS, and other mainstream formats, required for smoothly playing the HEVC encoded contents on smartphones, tablets, apps, TVs, gaming systems, etc.

Encode videos into HEVC/H.265 for smaller size and easier sharing:

MacX Video Converter Pro is a feature-packed HEVC video converter that can compress and convert 4K/multi-track HD videos to HEVC/H.265 to save storage space and bandwidth consumption. The HEVC encoder is preprogrammed with 410+ readymade profiles, covering everything from the breathtaking HEVC (.mp4 and .mkv) to the latest iPhone X, iPhone 8 (Plus), iPad Pro, Apple TV 4K, Samsung Galaxy S8, and more, so that you won't tinker with the parameter settings but directly use them for intended purposes, such as play HEVC on iPhones iPads running on iOS 11 or Macs working with High Sierra. In addition to HEVC video converter, it can also download online videos, edit videos, record screen, and make photo slideshows.

Apart from HEVC video converting, the program leaps forward with 2k/4k upconverting and downconverting and accomplishes a dramatic speed boost with the aid of hardware acceleration tech, according to MacXDVD. Now users will convert a 4k file (4.30 min) on an Intel QSV enabled computer in 1 minute only, which is up to 5x faster than competitors.

Pricing and Availability:
