

The New Mailbutler boosts Apple Mail and Gmail productivity

Published on 01/23/18

Mailbutler GmbH today announces the latest version of their email extension is broadly available for all Gmail and Apple Mail users. The lightweight extension offers an unique approach to productivity: it acts as a Swiss army knife for emails while integrating seamlessly into the native Apple Mail and Gmail interface. Readily compatible on both email clients, the new Mailbutler brings major updates to its functions with added features and a fully revamped interface.

Berlin, Germany - Mailbutler GmbH, creator of the leading email productivity plugin, announced today the latest version of their email extension is broadly available for all Gmail and Apple Mail users. Readily compatible on both email clients, the new Mailbutler brings major updates to its functions with added features and a fully revamped interface.

"Following the success with Apple Mail, we listened to our customers' demands and brought our email software expertise to Gmail. Many email companies unfortunately only market one type of email function - we saw an opportunity to bring together all types of complex email features under one roof. This is why we decided to bring the simplicity of Mailbutler to a second platform." shared Tobias Knobl, co-founder and CEO of Mailbutler. Gmail and Apple Mail users can perform tasks with Mailbutler such as email scheduling, receive read receipts, upload files to cloud services, create signatures and templates, share notes and tasks - all without the need to install multiple third-party tools. The redesigned Mailbutler Dashboard now allows users an easily accessible overview of all their email activities.

The lightweight extension offers an unique approach to productivity: it acts as a Swiss army knife for emails while integrating seamlessly into the native Apple Mail and Gmail interface. "We want to help users take back control of their inbox," added Tobias. The all-in-one plugin maximizes efficiency of emails, helps users to stay organized and leverages time in a smart and intuitive way.

"Our team worked tirelessly over the past six months to perfect the new Mailbutler, and we're proud to have built a powerful yet agile solution that meets the needs of our multi-faceted customers," shared Fabian Jager, Mailbutler's co-founder and CTO. Introducing its biggest update in its two year history, the Berlin-based company also celebrates hitting a milestone with over 100k users. With the options of Free, Professional and Business plans, the new Mailbutler is now available for download.
