

KeyCue 8.7 - the last maintenance release before KeyCue 9

Published on 03/27/18

Ergonis Software today releases KeyCue 8.7, a new version of the company's highly acclaimed keyboard shortcut cheat sheet. KeyCue displays an instant overview of the currently available keyboard shortcuts; application-specific menu shortcuts as well as system-wide hotkeys and user-defined shortcut descriptions. KeyCue 8.7 is scheduled to be the last maintenance release for KeyCue 8, while Ergonis is already preparing to release the major version KeyCue 9 later this year.

Perg, Austria - Ergonis Software today released KeyCue 8.7, a new version of the company's highly acclaimed keyboard shortcut learning tool. KeyCue 8.7 is scheduled to be the last maintenance release for KeyCue 8, while Ergonis is already preparing to release the major version KeyCue 9 later this year.

KeyCue 8.7 can now display macro shortcuts of yKey (former "iKey"). It offers faster animation of the menu scanning process and additional information during the installation process. Besides that, the new version fixes a cosmetic issue on High Sierra and contains compatibility improvements with PhotoLab and Photos. Visit Ergonis Software's website to learn more about the changes in this release and to download and try the new version.

Moreover, Ergonis Software is already preparing for the next major version, KeyCue 9, which is scheduled for release later this year. It will come with great new features that open the door to more efficient usage, more power and more fun. But there's no reason to wait for KeyCue 9. All KeyCue purchases (new and upgrades alike) made now already include the major upgrade to KeyCue 9.0 and all subsequent 9.x upgrades.

The productivity paradox of keyboard shortcuts is that shortcuts were designed to increase productivity. However, productivity actually decreases when applications provide large numbers of shortcuts, in particular when the shortcuts are defined inconsistently across applications. KeyCue's elegantly simple solution is to display an instant overview of currently available keyboard shortcuts, application-specific menu shortcuts as well as system-wide hotkeys, and user-defined shortcut descriptions. Over time, KeyCue users will automatically remember frequently used shortcuts and start working more efficiently.

KeyCue has already received many awards, including a 4.5-Mice award from MacWorld magazine.

System Requirements:

- * Mac OS X 10.6 or newer
- * Compatible with macOS High Sierra (10.13)

Availability and Ordering:

The upgrade to KeyCue 8.7 is free for anyone who owns a license for KeyCue 8 or purchased a license for KeyCue 7 on or after March 1st 2015. Upgrade paths are available for owners of older licenses. All KeyCue purchases (new and upgrades alike) made now already include the major upgrade to KeyCue 9.0 and all subsequent 9.x upgrades. For information about purchases, including enterprise licenses, volume discounts, and upgrade pricing offers, see the company's web site.
