There is a multitude of software developed only for the Windows operating system and even when software vendors port their applications to another platform, generally it lacks features that the Windows version contains. The only solution these developers face is to have access to both systems for testing which leads to increased infrastructure demands, and wasted project resources. Our goal is to have native ports of essential Windows tools and applications made available for MacOS users. All Material and Software (C) Copyright 2018 WinOnMacs. All Rights Reserved.
