

Sound Siphon 3 brings powerful and easy audio capture to the Mac

Published on 06/14/18

Static Z Software today releases Sound Siphon 3, a feature update to their popular audio capture application for macOS. Sound Siphon makes it easy to capture your Mac's audio. Use it to create virtual input audio devices that send audio from one app to another or, record right in the Sound Siphon app. Version 3 adds a new, easy to use interface, fully configurable channel mapping and a live mixer, making Sound Siphon the most flexible and capable audio capture product available for the Mac.

Rochester, New York - Static Z Software is proud to announce the release of Sound Siphon 3 which expands on Sound Siphon's ability to capture any audio on the Mac. Sound Siphon makes it easy to capture your Mac's audio. Use it to create virtual input audio devices that send audio from one app to another or, record right in the Sound Siphon app.

Sound Siphon has a brand new, easy to use interface that makes it easier than ever to create virtual input devices that capture the Mac's audio. Use Sound Siphon to send audio between your favorite applications or easily record directly in the Sound Siphon application. Sound Siphon excels at recording Skype conversations, broadcasting game audio, recording podcasts, and much more.

New in Sound Siphon 3 are configurable channel mapping as well as a live mixer. Users have complete control over the final mix of audio enabling them to get their captured audio just right.

Features:

- * Easy to use interface
- * Capture system audio
- * Capture specific application audio
- * Include microphones and other audio inputs
- * Live mixer
- * Built-in recording

System Requirements:

- * macOS Version 10.11 - 10.13

Sound Siphon 3 has a free 14 day trial and can be purchased for \$49 (USD), half the price of similar products. Special upgrade pricing is available for those that have purchased previous versions of Sound Siphon.
