

## **Scott Bedwell releases My DJ 1.0 - Changes the Way You Listen to Music**

Published on 10/28/09

Independent iPhone developer Scott Bedwell has announced My DJ 1.0 for iPhone and iPod touch. My DJ offers a new way of listening to music by playing random parts of the user's songs rather than playing whole songs at once. Users can specify how long of each song to play in the settings of their device. My DJ starts by playing a random part of a random song from the device. After the chosen time period, this song is faded out and a new song fades in.

Bentonville, Arkansas - Independent iPhone developer Scott Bedwell has announced My DJ 1.0 for iPhone and iPod touch. My DJ offers a new way of listening to music by playing random parts of the user's songs rather than playing whole songs at once. Users can specify how long of each song to play in the settings of their device. My DJ starts by playing a random part of a random song from the device. After the chosen time period, this song is faded out and a new song fades in.

At any time, if the user decides to continue listening to the entire current song, a click of a button provides this option. My DJ can be used in this manner to scan through a device's songs audibly, much like one would scan through the stations of a radio then stop to listen to a song. Users can also pause/play, skip to the next song, go back to the previous song, and adjust the volume at any time. My DJ also displays the current song's title, artist's name, album artwork, and a progress bar indicating when the song will change.

### System Requirements:

\* iPhone or iPod touch 3.1 or later
