

## **ZiggySoft Releases iWeb Valet 2.3.0 - Enhance and Upload iWeb Pages**

Published on 10/30/09

ZiggySoft today announced iWeb Valet 2.3.0, the tool to enhance and upload iWeb pages. iWeb Valet widgets give you the power to add new interactive widgets to your web pages. It is both easy to use and incredibly powerful, adding many features to iWeb sites and you don't have to know anything about programming or web-authoring languages such as HTML or Javascript. Version 2.3.0 includes the ability to have unique meta tags on all pages, a new Falling Snow Effect widget, and more.

Rome, Italy - ZiggySoft today announced iWeb Valet 2.3.0, the tool to enhance and upload iWeb pages. As in Apple's iWeb 09, iWeb Valet gives you the power to add new interactive widgets to your web pages. iWeb valet will only upload files that have changed (or new files). This saves time, because you will avoid, whenever you make a single change in iWeb, to re-upload the entire site. There is also an option to remove the files in the destination when correspondent file is not present in the source directory, in order to save space in your web server, which will provide more room for documents as your site expands.

### Feature Highlights:

- \* Add many powerful widgets to your web pages
- \* Personalize iWeb page titles by adding a prefix of your choice
- \* Add a favicon to your iWeb HTML pages
- \* Add a Hit Counter to your web pages (using Google Analytics, Statcounter or other similar web services).
- \* Fool spam bots by encoding all email address in your iWeb pages, so that the email couldn't be picked up by these bots
- \* Add META tags to provide more information about your webpages and gain a top ranking on crawler-based search engines that support tags
- \* Perform multiple 'search and replace' operations on all html files contents at once; you can easily make changes of simple text chunks as well as html tags and iWeb default naming conventions
- \* Encode special characters inside your web pages to solve some display anomaly in non-English texts
- \* Change the maximum size of all JPEG images of your site simultaneously and very quickly
- \* Apply a fixed compression ratio to all JPEG images of your iWeb site folder, to save space in your web server
- \* Add to your iWeb site folder other folders and files not managed by iWeb (favicon, programs, documents, etc.)
- \* Preview your modified pages in a browser at any time; you don't have to upload it to a web server first. When you preview a page, all browser-related functions should work, including JavaScript behaviors, absolute links, etc
- \* Work on a temporary copy of your site folder: use iweb valet with Dreamweaver or Golive local sites as well
- \* Backup/Restore functions to protect your iWeb sites files from accidental data loss.

### Changes in version 2.3.0

- \* By popular user request, now you can choose to have different Meta tags for each page of your website or a unique Meta tagging on all pages
- \* Added 6 new Meta tags
- \* New Falling Snow Effect widget
- \* Some interface improvement

### Pricing and Availability:

iWeb Valet 2.3.0 is available now for \$25.00 (USD). It supports Mac OS X 10.4, 10.5,
