

## **Outraged, Bored? Now is the Time to UnFaceBook. Come on Over to WebSonar**

Published on 11/30/18

NeoNet Corp has developed a document management solution that solves the social network information privacy problem. WebSonar is a macOS application that dynamically generates a WWW presence from content stored in WebSonar Libraries. With WebSonar you serve your own content, hosted on your own computer, located at home, in a Data Center, or at your School without trading your privacy. No Tracking, No ads, No Likes, No Nagging, No Registration, Safe and Secure.

Salmon Arm, British Columbia - NeoNet Corp has developed a Made in Canada document management solution that solves the social network information privacy problem. WebSonar is based on Virginia Systems' Sonar Professional search engine that was originally developed in 1988. WebSonar combines this powerful search engine with a standard web server to provide a flexible and scaleable, browser based document management solution.?

WebSonar Libraries provide a platform for sharing that does not require users to trade their privacy. Every individual library can host an unlimited number of documents. Each Library's home page has a unique URL, provides search functions and a ten page looped slide show. The library's document access is controlled by the library owner.

The service is free with an option to contribute a small monthly commitment of \$5.00 for the use of one hosted Library, but this is strictly voluntary. There is no limit to the number of participants in a library group. Each group member can be provided with the upload password by the library owner so they can contribute content as well as participate in the exchange. You can set the access to your content to private or public. If it is set to private visitors will require the upload password to browse the content. Use the Comments link for discussion.

### Privacy Statement:

WebSonar does not collect any information from your computer or from anyone accessing your library.

### Security Statement:

WebSonar encrypts your password. A forgotten password can not be retrieved. The users library can only be reset to default (to no credentials) if you have physical access to the server.

"If you think the internet is not working in its current incarnation, you can't change the system through think-pieces and F.C.C. regulations alone. You need new code," stated Duane Bemister, Principal.

### We Offer Five Scalable Solutions:

- \* 1 Library - \$5.00 per month Hosted in our Data Center (free trial period, no registration required)
- \* 9 Libraries - \$9.99 WebSonar 9 macOS app includes in-app purchase to serve to the Internet
